26: **Nikon** : 01/12/21 00:20
I have three (w one power supply is dead.

[>> 3](#)
I can do it.
I was impressed by the sonic that I got from TERA-NET.
↑
How many people know this?

27: **Nikon** : 01/12/21 15:11
[>> 3](#)

I have a ROM dump tool.

By the way, it is a little comfortable if you do an advanced big strategy
at 10 MHz.

28: **Nikon** : 01/12/21 15:40

[>> 10](#)

The name is "Petabry" Kibon.

In TV commercials, I remember that the head of a stone statue hit like an American cracker, and I was doing "two brains".

The development code was "TERA" (from Bomaga at that time)

29: **27** : 01/12/21 15:54

By the way, the instructions for Terradora are hot.

"68000 + i286 + Z80, 16 + 16 + 8 = 40bit (!?)" w

It is new to my memory that two SH2s were piled up in Saturn and they were beaten under the name of "64bit".

There was a solid criminal record. Indeed SEGA.

30: **Nikon** : 01/12/21 21:02

But 286 and a maximum memory of 2.5 mega? And HDD of strange standard was a gun ...

31: **_** : 01/12/22 09:13

Information gathering on Terranet

32: **Nikon** : 01/12/22 23:37

How many people did WIN on the front and Sonic on the back as advertised ...

The video output of Terra Dora was more dirty than Megadora. I can't stand my eyes (w

33: **Nikon** : 01/12/23 14:08

I only have a genuine 13-inch monitor.

34: **Mr. Nikon** : 01/12/23 18:11

AT is an affordable monitor that can display 1024 * 768 by interlace.

When sold by T-ZONE, it was model 315,000 yen and monitor 35,000 yen.

35: **Mr. Nikon** : 01/12/24 20:23

If this machine was not 286 but 386, history might have changed ...

36: **Nikon** : 01/12/24 20:43

[>> 35](#)

If it's a socket at least ...

Although the CPU was removed and there was a person who put the 486 accelerator on,

Is it really done?

37: **Mr. Nikon** : 01/12/24 21:35

It seems to have moved. After adding an address line and loading more memory.

It's also the past log noodle doi and (^ ^ ;;

38: **Nikon** : 01/12/25 05:05

2 >>

It's a late reply,

Is it the world's first DOS / V machine, a magazine? I have read in.

As expected Sega ... Do you have foresight?

39: **Nikon** : 01/12/25 06:08

[>> 38](#)

That's different.

Certainly it was the early days of DOS / V, but that was not the first.

Hmm, DOS / V was a software precedence.

40: **Nikon** : 01/12/25 06:22

It was popular to process it into address lines and put 4MBSimm on it while 1MBSimm was the upper limit.

Peel off the 80286 from the board, attach the socket and put the CPU accelerator for 286

There was.

41: **Nikon** : 01/12/25 06:28

I remember that I thought I was having a hard time with EMS, 286

42: **Nikon** : 01/12/25 07:17

The EMS circuit was piled up by hardware.

43: **Mr. Nikon** : 01/12/25 07:51

Or rather, EMS was originally done on hardware.

LIM EMS can be used for both software and hardware

44: **42** : 01/12/25 08:46

[>> 43](#)

PC-98 does not have a machine equipped with a hard EMS as standard equipment,

They can only recognize EMS = virtual 86 mode.

45: **Mr. Nikon** : 01/12/25 23:29

Is it ABM? Axela.

46: **Nikon** : 01/12/25 23:43

There seems to be a lot of people on Terranet here.

I also had a certain lecture by Mr. F.

47: **ID is 3800 series** : 01/12/26 00:03

There was only information on Terranet (^ ^ ;;;

Even the articles about "Introduction of SEGA BBS" by Satamaga were ignored by SEGA in-house volunteers.

The lucky BBS that was operated

I am also thankful to Mr. F.

48: **Nikon** : 01/12/26 00:05

[>> 44](#)

Ooooooo. There was a hardware EMS.

Melco names EMS memory `` for protection "
It was sold to distinguish it from hardware EMS.

There were some BMSs with different addresses and switching methods.

49: **Nikon** : 01/12/26 00:07

If you look at the log, you can see 3200 series data

50: **Nikon** : 01/12/26 00:12

Information about bus swaps.

51: **Nikon** : 01/12/26 00:22

When I trace the logs further, the oldest log that remains at hand is December 25, 1994. Uh-I wonder if it was like this before (sweat It seems that 32X was still the time of Donoko (^ ^;

52: **46** : 01/12/26 00:37

When I saw the log, it was in the 1900s.
Everyone is young.

53: **51** : 01/12/26 00:45

I wanted to do Subterania (^ ^ ;;;
I bought it when Terra was sold and it wasn't until then.

54: **Nikon** : 01/12/26 00:59

Right now, the library for C language was released on the dead Terranet.
I wonder if there was no one who made it.

55: **Nikon** : 01/12/26 01:00

C language library Apukibonnu

56: **Nikon** : 01/12/26 01:06

I think it was published too late> Library

57: **Nikon** : 01/12/26 01:09

I mean, I didn't want to release the bus swap specifications from the beginning
I wrote it in an advertisement, so I had no choice but to muddy the tea
I guess. It's definitely a scam. Yes.

Even on the phone, it was a secret point. Are you stupid?
Even C libraries are prohibited from reverse engineering. Do not make me laugh.
I didn't even get a tera CD. What is the top lid?

Uncle head. seriously.

58: **PIN ♦ hPINwf52** : 01/12/26 01:13

I tried building this thread, but it's completely Japanese.

59: **Mr. Nikon** : 01/12/26 01:14

[>> 58](#)

Accidental explosion please in the Middle East

60: **Mr. Nikon** : 01/12/26 01:18

Wasn't the bus swap crushed in a new lot?

61: **Nikon** : 01/12/26 01:22

Was there a new lot in the first place?

62: **Nikon** : 01/12/26 01:23

[>> 60](#)

It is the first ear. Detailed story

63: **Mr. Nikon** : 01/12/26 01:26

-5V or -12V was added to the expansion slot in the new lot (w
Isn't that so?

64: **Nikon** : 01/12/26 01:27

[>> 63](#)

Isn't it a remodeling service at CSK?

65: **Nikon** : 01/12/26 01:27

[>> 60](#)

66: **Mr. Nikon** : 01/12/26 01:27

[>> 63](#)

Is the sound blaster not working?

67: **Nikon** : 01/12/26 01:28

[>> 64](#)

Is that so? Sumaso

Until the end-V without leaving? In a sense, it's amazing (^ ^ ;;

68: **Mr. Nikon** : 01/12/26 01:29

That's right. Sure.

69: **Nikon** : 01/12/26 01:30

So, the information on bus swap Kibonnu

70: **Mr. Nikon** : 01/12/26 01:32

I don't really understand that

I think there was a person who was playing the FM sound source on
the Megadora side from DOS,

Now ...

71: **Nikon** : 01/12/26 01:35

[ttp: //www02.so-net.ne.jp/~gstrikes/aftera/](http://www02.so-net.ne.jp/~gstrikes/aftera/)

If you request in ん ば, there might be some reaction.

72: **Mr. Nikon** : 01/12/26 01:36

Request Kibonnu

73: [42](#) : 01/12/26 05:17

[>> 48](#)

Was it standard equipment? Which model?

Of course, I know that Melco and IO data made it.

However, until the 80286 model era, the bank memory system was the mainstream.

74: [Nikon](#) : 01/12/26 06:52

[>> 73](#)

PC-9801DX / UR / UF

PC-9801N / NS / NS / E / NC / NS / T / NL / NS / L / NA / NS / R

PC-98HA

PC-9801-53 (Expansion RAM board)

Without these, how would you use EMM.SYS / F = C000?

75: [Nikon](#) : 01/12/26 08:19

[>> 73](#)

Or do you know 42 and speak?

Do you know the bank memory method?

Do you know the EMS in the first place?

76: [PIN ♦ hPINwf52](#) : 01/12/26 15:28

[>> 59](#)

It's not a mistaken explosion

77: [Nikon](#) : 01/12/26 15:39

Sega ga ga comes out in the game as a tera drive.

78: [Mr. Nikon](#) : 01/12/27 00:43

Will it come out? A little saved (w

79: [Nikon](#) : 01/12/27 02:08

42 is embarrassing ...

80: [Nikon](#) : 01/12/27 04:33

From that time, I remember being sneaky in PC magazines.

I was studying programming when I was in high school

The machine I bought with the money I earned after working hard

This was it.

It was a machine that was completely unsuitable for beginners, despite being offered by game makers.

There were no DOS / V apps running at that time running smoothly on 286 machines.

I bought a crying Epson PC-286C.

This also has only one C bus, and memory expansion can only be done with the C bus

Whether to add SCSI to one C bus or add more memory

We are forced to make the ultimate choice. If you give up memory for crying HD

If it is 640k, the C compiler is no good.

This is no use
Finally I got my term deposit canceled to go to university
I bought PC-386S. Thanks to that, the university can only be recommended

81: **Mr. Nikon** : 01/12/27 04:35

I think the Japanese processing in the software at that time was too strict with 286.

What was the TerraDrive user using this machine for?

82: **Nikon** : 01/12/27 10:47

[>> 81](#)

What was used for copying and formatting floppy disks?

83: **Nikon** : 01/12/27 11:05

> 81

Ichitaro V4.3 was comfortable with Terra Drive, what?

84: **Nikon** : 01/12/27 11:25

I was connected to ice inside sega.

85: **Nikon** : 01/12/27 16:58

[>> 83](#)

[>> 81](#)

> Ichitaro V4.3 was comfortable with Terra Drive, but what?

>

Ah, I think it was pretty tough.

86: **Mr. Nikon** : 01/12/27 19:01

BASIC / 98 Okushiga Edition (or Fast) open "COM1: Open the descriptor with ...

Even a simple program that captures and displays one line with LINE INPUT will easily overflow the buffer at 75 BPS.

It was late? (W

1200 is a dream again (^^;

87: **Mr. Nikon** : 01/12/28 00:03

[>> 83](#)

Modified?

88: **Nikon** : 01/12/28 01:04

I'm an outsider, but only the defective FD drive that I distributed for free with T-ZONE is rolling into the closet.

[>> 40](#)

> It was fashionable to process the address line and put 1MBsimm as the upper limit and add 4MBsimm.

I can do that, isn't it something that can be applied around TOWNS?
Hope more details.

By the way, does 95 and LINUX work if I fire Axela?

89: **Nikon** : 01/12/28 13:02

[>> 88](#)

Because all remodeling articles were gathered on Terranet,
Maybe there are few people who keep their information now.

90: **Mr. Nikon** : 01/12/28 13:06

> 88

I remember that, but at that time the IBM machine was
The ID is built into the vacant pins of the SIMM and only our SIMM
Had to be unrecognizable. Patch it with wiring
It was like moving something.
I was not a terra, but a 5551 I picked up at a junk shop
But I was doing something similar.
There was a floppy, but the logic of the signal was the opposite.
There was something (I guess it was density control?)
It was an annoying machine.

91: **Nikon** : 01/12/28 14:33

[>> 89](#)

After all, I have no choice but to find out a certain Mr. F.

92: **Nikon** : 01/12/29 15:18

[>> 86](#)

Are you serious?
Even with my 8bit (2MHz or less), I think I managed to get that much.

Also, do you feel like you heard that the second cereal was sleeping as
a cecum?

[>> 90](#)

Certainly 72pin-simm had a 4-bit ID to specify the capacity. Is it a
relationship?

93: **Nikon** : 01/12/29 18:40

[>> 90](#)

The SIMM used for the Terra drive is 30pin, so it's probably different.

94: **86** : 01/12/29 20:09

[>> 92](#)

It's terrifyingly serious (w
At that time, I was opening a BBS for my friends with 88Mk2 + RAM
disk, but I was sick with two 320kFD (^);
Attempting to buy two cheaply sold Terra and BASIC / 98 and port
them (the original program is BASIC + machine language)
I did, but I abandoned it because I couldn't use cereals anymore.

Oh, I'll say it in honor of Terra, but I was able to properly use serial in
EXE format applications such as WTERM.
I had an octopus around the serial processing of BASIC / 98. Well, it
was common that the screen display was slow ...

95: **Nikon** : 01/12/29 23:23

I know BASIC / 98 well, but maybe use BIOS serial processing as it is
I guess it's not good
I think that BASIC / 98 was probably a port from 9801 to DOS / V
from the name
As you can see, the IBM machine is rotten around the BIOS serial, so
the application is
It was common sense to handle it on your own.

96: **Mr. Nikon** : 01/12/29 23:34

[>> 95](#)

The AT's BIOS does not support interrupts.
However, some old Toshiba laptops had some BIOS calls added.
The serial interrupt was also handled by BIOS.

97: Young: 01/12/30 11:56

The basic school is the main building.
I'm gone now.

98: **Bus Chief** : 01/12/30 12:33

I bought a temple drive when my brother beamed. I was still an
elementary school student.
A few years later, the power supply is flying
After that, I had a VIP machine at TW ◦ T ◦ P.

99: **Mr. Nikon** : 01/12/30 18:03

[>> 97](#)

It looks like another company keeps selling.

103: **Mr. Nikon** : 02/01/04 19:15

The time you put it out was too bad. It's the worst that I didn't disclose
the internal materials ...

104 : **Nikon** : 02/01/04 22:53

[>> 103](#)

Super extreme ultra intense agreement !!!

105: **Nikon** : 02/01/05 09:48

The design was basically done by the IBM side, so there is nothing I
can do for Sega.

106: **Nikon** : 02/01/06 01:46

[>> 105](#)

It doesn't matter if you don't release the specifications.

107 : Eto : 02/01/07 18:18

TERA = DRAIVE to TERA-NET ...

Well, only monitors were popular ... TERA

The planet Sega World was like a shit.

There are people who can not see Yumiko Takahashi and are playing in front of the venue

The trend of not taking care of the customer has been passed down to Drikashis before that time

I think ...

108: **Nikon** : 02/01/07 23:27

If you don't want to make it public, you can exchange data between 80286 and 68000 by bus swap!

If you don't say it, you would have thought that the machine was just a Megadora attached to the AT ...

Rather, he might have been happier.

109: **Nikon** : 02/01/08 00:48

Forgive Yumiko Takahashi because she was cute.

110: **Mr. Nikon** : 02/01/09 22:24

I have the first issue of "TERA MAGAZINE", a Teradora information magazine (free paper issued by SEGA).

The cover is Guppy.

In the article, "You don't need a 486 machine to play IBM PC games."

Although there is a masculine phrase, a speed-up method that eliminates the weight of memory

Is being introduced ...

It seems that there is No. 0 of the first issue preparation (not owned), but it was issued after No. 2

Is not it? Information desk.

Owns our model 3. By the way, Ichitaro moved properly. Win3.0 feels like

It was so slow that it went crazy.

I did not use the main unit so much, but the monitor is PC98, X68, AMIGA, MAC, game base

It was a great success by connecting etc. I use it as a vertical monitor to do a vertical shoe

It can still be used without any damage.

111: **Nikon** : 02/01/09 23:44

> 99

Distributor of the infamous HD format software

112: **Nikon** : 02/01/10 03:45

[>> 110](#)

Certainly, there should be 0, 1, 2.

For some reason I have two books ...

113: **Mr. Nikon** : 02/01/11 00:44

[>> 112](#)

Thank you for information. My 10-year question has been melted.
The interval from No. 0 to No. 1 seems to be about three months, but is
the issue of No. 2 about July 1992?
Does No. 3 exist?

114 : [> 80, but my brother, San, who had](#) survived in the past [life !?](#)

154: [Nikon](#) : 02/02/02 04:51

[>> 152](#)

Wow ... I didn't notice it until now.

Maybe it was a typo, or it was a serious mistake.

155: [Nikon](#) : 02/02/03 02:53

Nostalgic ... Terra Drive.

I bought it as a set at 39800th place because I wanted a monitor for AMIGA.

Use Hi-Text to make it 800 x 600, move Megadora at 10Mhz, and change floppy to 3 mode.

I did a lot while watching the Terranet. I longed for a 486 compatible CPU.

By the way, this is an AX computer, right? Certainly like Kanji Rom was riding ...

Suction tool for Megadora ... Is there any way?

156: [Nikon](#) : 02/02/03 03:14

Why is the TeraDrive equipped with 68000?

Is it a mega drive?

157: [F but :-\)](#) : 02/02/03 03:32

I was told to see what the name was, but I got to see it ~

It's troublesome to do various res, so >> 155 is easy to see right before (laughing

res, it's not AX. It is an IBM genuine computer.

It is an IBM genuine Han ROM, and if you have FONT Driver, you can use it freely.

Even if the 386 is on, addressing with BusSwap Chip

It doesn't make sense because it collides with the 386 paging mechanism.

Certainly, I think the 386 sold on the market, though.

That was IBM's position as a further extension of the 5510.

By the way, the WD76C10 / 20/30 chipset supports 386SX, Ride as it is (pull the line)

And :-)

ps

After all, the sound of money when defeating the enemy is irresistible (mystery

158: [sage](#) : 02/02/03 04:29

I still have the telephone card of Yumiko Takahashi, which I got when I bought Terra Drive.

I guess it was spring 1992.

Playing with Lemmings and SimCity ... I guess TERA-NET also joined.

Lemmings want to do it again.

159: **F, but :-)** : 02/02/03 04:49

Ah, I wonder if I could get that telephone card at the TERADRIVE event.

SUB TERRANIA and Super Shinobi II are the best :-)
(Also Luna Eternal Blue)

160: **[There is a famipachi ...](#)** : 02/02/03 06:11

Megapachi or Dennukau ... It's interesting, though;
However, NES used kits are sold at kedo and megadora
The cassette is sold, Hong Kong-san is also,
Understand Kade-san's Napporo ...
(It's selling well and there are not many numbers.

However, the CPU MC68000 is 16 bit,
Is it a 16 bit data bus?

In the past, when I opened the kit, there was only one key ROM and it was a kedo;

161: **Nikon** : 02/02/03 07:05

Wow F (^ ^)

Thank you for your help at TERA-NET. sonic was the best.

I still regret not being able to buy SUB TERRANIA.

Go to Akihabara with 10,000 thousands! I couldn't go too (w

162: **Mr. Nikon** : 02/02/03 08:40

[>> 147](#)

"Sonic the Headhog" ... I misprinted the signboard game.

163: **Nikon** : 02/02/03 17:12

Wow, F is here! (W

>> It's not AX. It is an IBM genuine computer.

If you think that the AX standard is based on the standard of IBM

Japan, it is completely different. Sumaso

Teradrive is a machine in the transition period from IBM standard to
DOS / V

I wonder if VGA is loaded with Kanji ROMs.

TeraDrive, which was stuck, could have various dreams because of the
information on Terranet.

I have a good feeling.

164: **Mr. Nikon** : 02/02/03 18:37

[>> 163](#)

If the DOS / V font driver itself has a Kanji ROM, support it

That's right.

Maybe there is something official, like OADG?
(Which magic number should be put in which address)
Kanji ROM = AX It doesn't seem like that (for the Kanji ROM part,
It may have been followed)

165: **Nikon** : 02/02/03 20:36

[>> 134](#)

The lower machine cannot go over the spec of the upper machine.
It's like being crushed by the unwritten rules of those days
I don't think it's the responsibility of IBM Japan.
The person in charge of Tsuka was still thinking that he was still on the
front line.

Halfway with PS / 2 model 30 286, etc. that sold to some extent
There was compatibility, and in North America, look for a 44-pin HDD
Perhaps it wasn't too hard to wander between Japan and the US.

166: **Nikon** : 02/02/03 20:46

It was pretty compelling on the hard disk and TERA-NET
In my case, the power supply died before the hard disk was full (w
It's not a trigger, but without setting up a spare
I'm away from TERA ...

167: **Mr. Nikon** : 02/02/03 23:00

What driver do you use when using Terradora Monitor, single win?
I couldn't choose a standard 1024 * 768 adapter ...

168: **Nikon** : 02/02/03 23:06

Isn't it up to 800x600?
If you're lucky you might pass 1024.

Also, why not change the display timing?

169: **F :-)** : 02/02/03 23:14

Everyone ~ :-)

SUB TERRANIA is right in front of you (lol
When I went shopping, the package was a little damaged,
I only had one, so I bought it ~

AX is a combination of IBM's Japanese display, hardware and
software,
There are two kinds of proprietary standards, so I have a memory that
seems to be compatible.
Anyway, it's been about 10 years ago (lol

When using the tera monitor in standalone Win
1024 * 768 should be an interlaced display.

I also have to turn the trimmer inside the monitor
I couldn't do it <I was turning it with the fire on :-)

PS

Oh, Luna is LUNAR ~

170: [Nikon](#) : 02/02/03 23:33

☆ Temple Drive ☆

171: [Anonymous 80286](#) : 02/02/04 00:10

[>> 169](#)

> AX is compatible with IBM's Japanese display, somehow hardware and software,

> There are memories that seem to correspond because of two proprietary standards.

The AX camp came out against DOS / V,
AX-VGA / H (Japanese display on hardware, DOS / V compatible)
AX-VGA / S (same, realized by software)
is not it.

But / S users say that Win3 can only be used in real mode ...

Was AX-VGA / S feared that this was the Σ standard in the DOS / V world?

The AX curse (last fart?) That leads to MS-DOS 5.0a / V ...

172: [166](#) : 02/02/04 01:05

Ah, nice.> SUB TERRANIA (^^ ;;

[>> 167](#)

Interlaced display as Mr. F is doing 1024 * 768

The monitor itself is small, so it may not be suitable for detailed work.

The trimmer inside the monitor is on the left side of the monitor when viewed from the front, and between the middle of the left side and the entire surface of the monitor.

It's about half way down. I don't have to pierce that part and remove the cover

I was able to turn the trimmer (laugh)

It was a high-performance monitor other than that. It was made by Sanyo (w

173: [Nikon 167](#) : 02/02/04 01:42

Hello everyone.

I bought it second-hand, but I was able to set it if I messed it up.

174: [F but :-\)](#) : 02/02/04 02:11

[>> 171](#)

Oh, a detailed explanation. Great :-)

[>> 172](#)

Well, you know that it is a Sanyo product (laughs)

I've seen a prototype monitor. White, just on the tera monitor
There is an adjustment system where the lid is blocking.

I wrote it in the past ^^; (distant memory)

PS
SUB TERRANIA has good screen and sound ~
I'm not going to give out to a certain person in Japan
The memory I showed. . .

175: [Nikon](#) : 02/02/04 04:21

Temple Net in 2 Channel

176: [Mr. Nikon](#) : 02/02/04 14:25

[>> 164](#)

Kanji ROM is available on IBM PCs running early DOS / V
Included and used by the font driver (\$ font.sys)

I was doing Certainly, when writing to the specified port, the bank is
stored in memory.

Kanji ROM should appear by switching.

In case of 286 machine, the extended memory where the kanji font is
placed

There is quite a bit of overhead when using it, and

Perhaps the memory capacity was small.

Initial PS / V, TERA-DRIVE, PT-110 (Ultraman PC)

Kanji ROM was listed.

AX is a standard created by ASCII, Microsoft and Sanyo

I think that's how it was. Why IBM Kanji ROM is around 5550

Wasn't it the base?

177: [Nikon](#) : 02/02/06 06:41

age!

178: [Mr. Nikon](#) : 02/02/06 11:27

Oh, what do you mean, "who" or "to whom"

I felt that the blurred writing was Mr. F.

I am thinking about that while editing the past log.

... It 's like I 'm all rose

179: [F but :-\)](#) : 02/02/09 06:41

Ah, Nikon-san, [>> 178](#) , who's wondering :-)

Recently, whether TERADRIVE can be connected to LAN by
connecting with Ether.

I'm thinking.

I don't even think about what to do, but ^^;

ps

Is it DC? Yes, of course hanging on Ether :-)

180: [Mr. Nikon](#) : 02/02/11 01:06

The analysis soul hasn't diminished yet (lol)

181: [Nikon](#) : 02/03/19 01:08

Conservation sage

182: **1** : 02/03/19 06:20

Age as 1

183: **Nikon** : 02/03/26 20:27

I only have a display for Terra Drive.

By the way, via VIDEO-> VGA converter

Used in video game monitors

(HTR-2200)

184: **Mr. Nikon** : 02/03/26 20:58

I only have FDD.

At one time, it was quite popular as a 3-mode FDD.

Suspicious, switch the mode. (W)

185: [Nikon](#) : 02/04/23 21:24

I only have a keyboard. I still hit it with it.

The main body and display have already been scrapped ...

186: **Mr. Nikon** : 02/05/12 01:51

What's the plan to connect MEGA-CD?

187: [Nikon](#) : 02/05/12 02:56

[>> 186](#)

There is no end to say that on Sega's hardware.

188: [Nikon](#) : 02/06/09 02:20

[>> 179](#)

Oh, there are 4 people (w

I remember that Tera was an XT bus, but I wonder if there is a card that can be connected.

And about AX, Microsoft and Ascii should have been involved in Japaneseizing EGA.

(So it's a JEGA card)

By the way, I remember that J3100 was a Japanese version of the CGA and was a DCGA (DualScan CGA).

After that, how did IBM translate DOS4 into Japanese and create DOS / V?

By the way, there is a strange function that can display double-width with AX and hardware.

I used Tera only in Haneda No. 1 building.

The box is huge, the old executive-only elevator Moe (w

189: **Mr. Nikon** : 02/06/09 18:57

> 188

Not an XT bus. Although it is an ISA bus, some power lines are omitted.

190: **Nikon** : 02/06/09 18:59

It's because it's IBM-approved, or that's why
What is the difference between ISA bus and AT bus?

191: **Mr. Nikon** : 02/06/11 16:06

It looks like a nostalgic person came. How are you?
My terra remains as if the tip of the chip blew green and could not start.
I used to play the ROM that was sucked out at that time by the MD Emu, but ...
After all, I could not analyze everything.

192: **Nikon** : 02/06/11 17:53

After all, couldn't you access the MD memory?

193: **Mr. Nikon** : 02/06/12 01:27

Yumiko Takahashi age

194: **Nikon** : 02/06/12 07:43

[>> 192](#)

When I write as much as I can remember,
If the MD cassette is stuck, it will cut between 68k and 286.
Then, just after the cassette, make a geta and activate it after turning on the power.
Ask the 68k side to read the mysterious spell and open the door.
After that ... what should I do?

195: **Mr. Nikon** : 02/06/12 08:49

Continued.
Was 68k memory mapped to the 286 EMS?
The memo around that is in the HDD of Megadora ~
By the way, the HDD is broken.

196: **Nikon** : 02/06/12 08:50

Modify.

× Megadora
○ Terradora

197: **Mr. Nikon** : 02/06/12 15:41

Is it a mysterious spell?
Thank you for the analysis.
I'd be happy if the memo around here was uploaded to the web.

198: **Nikon** : 02/06/17 01:11

Memo P Kibonne

Since the monitor supports 31.5kHz as standard, X68 users and
It seems that AMIGA users wanted it.

The leaking palm was AMD286. This is the whole lot
Is that so? . .

213: **Nikon** : 02/09/23 03:05

> 212

> Since the monitor supports 31.5 kHz as standard, X68 users and

> It looks like AMIGA users were eager to do so.

214: **Mr. Nikon** : 02/09/25 20:58

[>> 213](#)

As for 213, the fact that 15KHz is reflected instead of 31.5KHz is the
cause of envy.

When I tried to plunge into it, I saw that she lost to the devil and sank.

215: **Nikon** : 02/09/29 23:41

I just had a keyboard at work.

"Gacha" is noisy type, so now on PC

In use.

216: **Mr. Nikon** : 02/09/30 22:56

[>> 214](#)

There were many fecal monitors that could only support 24K.

217: **Mr. Nikon** : 02/10/03 13:24

[>> 216](#)

The monitors without X68000 TV were 15k and 31k.

I wanted 24k and bought a new X68000 monitor with TV.

This is 15k + 24k + 31k.

When the DOS / V screen was displayed on the TV monitor of the
X68000, the left edge was cut off although synchronization was
possible.

So when I went to buy a VGA monitor, I bought a tera monitor with a
teradrive for almost the same price as a VGA monitor alone.

This is the real reason why I bought Terra Drive.

218: **SEGA employees** : 02/10/03 17:11

The enclosure called "blast city" of arcade is 15k + 24k + 31k.

Moreover, it is 29 inches. I think it is possible to buy it for about
30,000 yen.

The thread difference is gone.

219: **Nikon** : 02/10/04 06:45

[>> 217](#)

Leakage is also a similar reason ... (laughs)

[>> 218](#)

I want blast leakage ... 15-31KHz monitor is precious.

It's just too big.

On the contrary, a 14-inch monitor with a color similar to Terramoni

that allows 1024x768 to be projected
I wonder if there is.

220: [Nikon](#) : 02/10/07 00:12

If the tera monitor is also interlaced, 1024x768 is displayed,
It's a shame that modern video cards don't come with interlaced drivers
on Windows XX.

If you want to use XFree86, you can get by with XF86Config.

If you project 800x600 on a tera monitor, it can be synchronized, but it
extends vertically.

Is there anybody who managed to adjust the trimmer in the back?

221: [Nikon](#) : 02/10/07 01:59

[>> 215](#)

If you think carefully, a workplace where you can introduce Terra
Drive,

Don't be frightened.

222: [Nikon](#) : 02/10/07 07:25

[>> 221](#)

I've heard that it was introduced for terminals. It was cheap.

223: [Nikon](#) : 02/10/08 01:30

seriously! ? Well, at that time, I was thinking about 200,000 yen for
Megadora,

It felt ridiculously expensive, but 200,000 was cheap on a computer
What?

I wonder if it sold unexpectedly.

224: [Mr. Nikon](#) : 02/10/08 02:28

[>> 223](#)

It's been about a year and a half since it was released

It was sold by mail order. Model 3

At that time, Ichitaro for DOS / V had already appeared, so word
processor

If it was about, I changed it.

Speaking of which, that keyboard also has a "click feeling"

It seems like some people still use it. SEGA logo included

That guy (lol)

225: [Nikon](#) : 02/10/08 15:51

I used it as a monitor and keyboard for Dreykas.

The main body is in the closet (straw

226: [Nikon](#) : 02/10/12 00:33

I also use only the keyboard. Certainly

It's noisy. And the body is too heavy for the size.

I tried to reuse HDD and FDD, but both of them are now

It seems to be different from the connection specification, and was eventually discarded.

227: [Malignant hakkaa rot-N](#) : 02/10/12 13:17

Wow, did you talk about Terra Drive?

I miss you. I almost don't remember anymore ... (^.^);.

I was told by Date Kun and bought it.

"If you use Dynabook SS001 as a server ..."

228: [Nikon](#) : 02/11/25 03:05

Hush Hush

229: [Mr. Nikon](#) : 02/11/25 03:11

Yumiko Takahashi age

230: [Mr. Nikon](#) : 02/12/01 23:34

Monitor, which driver works with 1024 with which driver?

231: [Nikon](#) : 02/12/14 00:33

Wasn't it up to 800x600?

Recently I wrote a code for Megadora, though not Terra.

It's a combination of a free 68K assembler and an emu.

It's the stage when Doremi rang in PSG.

232: [Nikon](#) : 02/12/14 13:22

Source code Apukibon.

233: [Nikon](#) : 02/12/14 16:59

Since it's a big deal, I'm planning to release it after preparing even the Christmas medley.

I want to make snow fall with Santa's picture or sprite, but VDP control is untouched.

234: [Nikon](#) : 02/12/27 20:41

After all, I could only hit one song.

<http://takashi.keddy.ne.jp/uploader/source/up0233.lzh>

235: [Nikon](#) : 03/01/04 02:51

In any case, the Z80 is also loaded and the functions of the SC-3000 are also

SC-3000 users may have changed if you have (w

236: [Nikon](#) : 03/01/04 12:30

Z80 ...

Doesn't the Megadora function already include Z80?

237: [Nikon](#) : 03/01/04 13:25

[>> 234](#)

Good!

238: **Nikon** : 03/01/04 15:33

Z80 starves like it was for sound

239: **Nikon** : 03/01/04 15:38

All the software used for sound, but it should have been possible to use Z80 as the main and 68000 as the sub.
235 doesn't have Z80 but mk3 VDP.

240: **Nikon** : 03/01/04 22:06

> It should have been possible to make Z80 the main and 68000 the sub.

I can't do it, stupid

241: **Nikon** : 03/01/04 22:45

Is that so? I swallowed BEEP Megadora

242: **Nikon** : 03/01/04 23:34

Is it a mega adapter?

Master system cassette adapter,

I removed the plastic case and was able to attach it.

I don't know if 68k is a sub, but at least z80 is the main

It should have been possible.

The VDP of mkII should have been a mechanism to make the main unit upward compatible.

reference

http://bto8.smspower.org/segapower/pbc/md_adapt.html

243: **Nikon** : 03/01/04 23:43

>> [241](#)

>> Do not seriously say what 2ch resident stupid like [240](#)

244: **naxchatte** : 03/01/04 23:49

>> [241](#)

Certainly, I remember reading such an article.

However, there are some articles that are quite good, so it is better not to take too much (^ ^;)

However, it seems that there was an adapter for running software for mk3 / master system, but it can not be said that it is a lie.

(I actually had it ... but when I took it apart, I didn't find any CPU or memory, of course, no custom chips, just a few TTLs.

I wonder if Megadora's VDP was able to run from z80 with the upper compatibility of mk3's guy?

Certainly, 256 kbit dual port rams can only be 8 bit configuration with two, so will it lead directly to z80?

245: **Nikon** : 03/01/05 00:03

This thread is nostalgic (あ

After getting 2 units at model ZONE + 50,000 yen in a certain ZONE

I used it for about a year and a half. S (I was also shocked).

One of them became an avenue due to the power supply ascension, but the spare still works.

246: [Nikon](#) : 03/01/05 21:20

Megadora's VDP includes mk3 functions (code 5?).

PICO of the kids computer seems to be the same VDP.

Some Megadora compatibles have a VDP with the mk3 function removed.

With Terradora, VRAM was doubled to 128K, and Z80 RAM was doubled to 16K.

247: [Nikon](#) : 03/01/05 22:37

Teradrive itself, omission that even the function as a mega drive is omitted

It's a machine.

248: [Nikon](#) : 03/01/05 22:41

I think the temple drive was 286 compatible

How far could you upgrade?

249: [Nikon](#) : 03/01/05 23:38

[>> 247](#)

Terra is not omitted

The only thing that doesn't come with a mega CD

250: [Nikon](#) : 03/01/05 23:45

I can't attach 32X to Tera Drive

251: [Nikon](#) : 03/01/05 23:50

If 32X was attached, it was a luxury PC of Z80, 80286, 68000, SH2

252: [249](#) : 03/01/06 02:19

Well, it didn't come with 32X. I'm sorry

Does 32X include SH2?

Well, 32X is hardly soft.

Ura's Terra did 8MB expansion and Cx386 conversion based on the information of Terranet at that time.

However, now it's about laughing ...

253: [Mr. Nikon](#) : 03/01/06 02:54

What is Yumiko Takahashi doing now?

254: [Nikon](#) : 03/01/06 03:03

[>> 253](#)

Are you really saying?

Super popular drama "Shomuni" Isn't it done in your area?

255: [Nikon](#) : 03/01/06 09:56

Don't watch the ground wave. Yumiko Takahashi, who came out in the case of "Heshomuni".

256: [Nikon](#) : 03/01/06 10:30

[>> 255](#)

Is it a heavenly person?

257: [Nikon](#) : 03/01/06 22:47

Was Tera Drive cheap at that time?

258: [Nikon](#) : 03/01/06 23:05

About 150,000-250,000 with 1/2 drive type or HDD built-in type

There was a gap, but I think it was cheaper at that time.

However, it was a strange price that the dedicated monitor was strangely expensive (about 80,000).

Sega people can buy a PC with the SEGA mark, regardless of specs It was buying. I was laughing without buying me.

259: [Nikon](#) : 03/01/06 23:12

Why did Terra Drive fail?

260: [Nikon](#) : 03/01/06 23:24

Because Terasoft did not come out

261: [Nikon](#) : 03/01/06 23:30

OS and software that can make use of the top CPU

I wish ... (' • ω • `)

262: [Nikon](#) : 03/01/06 23:36

Due to pre-OS issues, the mega part 68000 and Z80, DOS / V 80286 are completely

I'm separated. It's just packed in the same case.

Also, the Z80 of Mega Drive is treated as a fully resident part of hardware.

You can't even hit just the Z80.

Really 286 is here, 68K is here, Z80 is here! How to use it in combination like split

God if you can, it's the best.

263: [Nikon](#) : 03/01/06 23:38

"TERA" of Terra Drive

What do you mean?

264: [Nikon](#) : 03/01/06 23:42

KIRO-> MEGA-> GIGA-> TERA-> PETA-> EXA-> ZETTA-> YOTTA

265: [Nikon](#) : 03/01/06 23:43

Tera because it is 10 times higher than the mega drive

266: [Nikon](#) : 03/01/06 23:46

[>> 264](#)

Sunkus

It was a unit

Did you skip GIGA-DRIVE ...

267: **Nikon** : 03/01/07 00:05

[>> 259](#)

The price didn't change much when the 386SX came out
I'm lucky that I made it to 286.
If Tera's CPU was 386SX, I also bought.

I mean, Intel added a strange color to the 286 segment
You made the 286 definitely fail. Weird about 2 bits
Use the segment number as a simple number without adding color.
It would have changed in the world.

268: **Nikon** : 03/01/07 00:50

Around the time TERA came out, the 386 spread at a stretch.
SEGAw is bad timing

I think the biggest bottleneck of TERA was the small amount of RAM
that could be mounted.
Was it a maximum of 2.5 megs without modification?

[>> 262](#)

How would you describe the one who rang the FM sound source with
the few TERA-specific software?
This is the stone hanging on the Megadora side

269: **Nikon** : 03/01/07 01:03

SC-3000, teradrive discipline
I don't think I'll give it out> SEGA
When I saw the article scheduled to be released on Terra Drive, from
SC-3000 failure
I was glad that I was able to stand up with an indomitable fighting
spirit ...

270: **Nikon** : 03/01/07 01:09

[>> 268](#)

There is no FM sound source in MEGA-DRIVE, only PCM sound
source.
I don't know what kind of sound source TeraDrive has accumulated,
but it's about DOS / V
Isn't it hard?

271: **Nikon** : 03/01/07 01:11

Is it true that the Terra Drive 2 was being developed as a successor?

272: **Mr. Nikon** : 03/01/07 01:15

Personally, TERA-DRIVE is an event rather than a failure
I think it was successful.
The main SEGA at that time was the original MEGA-DRIVE, and that
was simply an IBM machine.
The fusion has become an industry-leading topic and has become a hot
topic.
Other active players such as PC engine and MEGA-DRIVE can be
installed as options
I think there was also a PC engine united in the X1-TWIN, 88 where

the X1 and PC engine united.

It seems like it was a spear to join different manufacturers.

273: **Nikon** : 03/01/07 01:17

[>> 270](#)

Megadora has FM sound source

274: **Nikon** : 03/01/07 01:18

[>> 270](#)

There's a stranger like this

ttp: //www.ipc-tokai.or.jp/~ytanaka/megadriv/mdsound.shtml

275: **Nikon** : 03/01/07 01:19

[>> 272](#)

Models that do not have a 88MC CD drive,

The original ROM ^ 2 should have been docked and used as a CD drive

I don't think the PC engine itself was playing

276: **Nikon** : 03/01/07 01:20

Ah, the FM sound source is on Megadora.

A guy who resembles 86 sound sources like PC88.

Terradora also has a DIP guy near the audio output

That would be an FM sound source.

277: **Mr. Nikon** : 03/01/07 01:24

I know the 88 monitor has a PC engine

278: **Nikon** : 03/01/07 01:55

CD-ROM was connected to 88 PC-8801MC.

The CD-ROM is the same as the drive of PC Engine's CD-ROM ^ 2.

[>> As of 275](#) , PC Engine software does not work.

It's not 86 86 sound sources, but 98 86 sound sources. 86 sound source is OPNA, Megadora is OPN2

Click here for sound sources that employ PCs and game consoles

ttp: //www.proc.org.tohoku.ac.jp/befis/das/fmlist.shtml

I thought about PC engine for 88 monitors for a while

NEC monitor with built-in PC engine (HE system) PC-KD863G?

ttp: //www1.odn.ne.jp/igy/pce_h.htm

279: **Nikon** : 03/01/07 12:07

There are many people who are misunderstanding.

Is this the reality of Terradora ...

Information to access the megadora part from the 286 side is unofficial on Teranet

It was published quite aggressively.

Those who know know everything, but those who don't know nothing.

280: **Mr. Nikon** : 03/01/07 14:23

Because I haven't seen a Terra Drive at that time.

Even those who knew from that time were just machines that fused 286

and mega drive

I don't remember.

At this time, if you were seriously thinking about replacing DOS / V, I was aiming for 386SX or 486

Probably, even as a consumer machine, a large amount from X68K and other game makers

It was time for a new model to come out, and who bought it was wrong or too rich?

It seems that teradrives are sometimes available cheaply at internet auctions these days.

I think only those users are left.

281: [Nikon](#) : 03/01/07 14:44

Because as 272 says, it was a festival.

However, it seems that you can connect a floppy disk and keyboard to the outside when Megadora is released.

There was also an announcement, so I think some idiots dreamed of like me, saving money on the day of the release and buying it at a fixed price.

I really only use a keyboard for now.

282: [Nikon](#) : 03/01/07 16:47

Let's get back to talking about the Terra Drive sound source!

283: [Mr. Nikon](#) : 03/01/07 16:59

It's not a great source

284: [Nikon](#) : 03/01/07 17:05

Yumiko! !

285: [Nikon](#) : 03/01/07 17:20

You can install 32X on Tera Drive, you need to disassemble it and the cassette

There is also a mega adapter available.

By installing 32X, it transforms into the strongest machine of SH2X2 + 80268 68000 + Z80.

By the way, the 32 mega drive equipped has the same function as Sega Saturn.

If you have a modem, you can connect to the Internet.

286: [Nikon](#) : 03/01/07 21:43

Super 32X is not a Sega Saturn so impossible

287: [Nikon](#) : 03/01/07 23:40

I wish Saturn BASIC would sell a moving PC

288: [Nikon](#) : 03/01/08 00:49

Can Terradrive be used for MD video codes?

32X inputs the video of MD side to video and then

32X video is also output together

289: [Mr. Nikon](#) : 03/01/08 00:50

[>> 266](#)

I wonder if there was already a computer named GIGA-DRIVE already?

I couldn't find it well, but I think it was around Amiga.

290: [Nikon](#) : 03/01/08 12:53

[>> 290](#)

I haven't heard

291: [Nikon](#) : 03/01/08 15:32

The pirated version of the Master System sold in Hong Kong was called Giga Drive

Besides, I registered the trademark properly.

292: [Mr. Nikon](#) : 03/01/08 17:53

[>> 288](#)

You don't have to worry because you can attach an ordinary pin jack.

If it had a structure of a normal DOS / V machine + a dedicated video board (built-in Megadora), it might have lived a little longer.

Speaking of which, there was also SEGA-PC.

293: [Mr. Nikon](#) : 03/01/08 18:05

Don't worry!

294: [Nikon](#) : 03/01/08 21:06

Are you talking about the Edge3D graphic board that Pants and Cabacha came with as bonus?

That was also a mysterious action of SEGA.

295: [Nikon](#) : 03/01/08 22:29

[>> 292](#)

What is SEGA-PC?

296: [Nikon](#) : 03/01/08 23:08

I have Edge3D (w

Well, there was a board that can use IO-DATA's Saturn controller / virtual gun on the PCI and C bus. Is there an ISA?

297: [Nikon](#) : 03/01/08 23:45

[>> 295](#)

Usually it is a series of ported SEGA games to Windows, but what I'm talking about here

A PC with an Edge3D and a Yu graphic board (sound function + saturn pad).

It was just when Windows95 came out.

298: [Nikon](#) : 03/01/08 23:48

That's it.

Not a megadora

To combine XBOX with PC please?

299: [Mr. Nikon](#) : 03/01/08 23:49

Windows runs on the dung box, but what?

300: **Nikon** : 03/01/09 00:11
300

301: [Mr. Nikon](#) : 03/01/09 13:09
I wonder if I can't do it on a PC.

302: **Nikon** : 03/01/09 14:25
> 301
Can anybody make an emulator?
It seems to be easy because the same CPU is used (Wara

303: [Nikon](#) : 03/01/09 17:33
It's difficult because it's encrypted

304: [Mr. Nikon](#) : 03/01/09 20:16
If MS starts to make a bad box 3 or 4, then win 2008 or 2012 (all are pseudonyms)
You'll be responding, right?

305: [Nikon](#) : 03/01/09 22:28
With the backup utilization technique 28 at hand, from mega drive 7 to 10MHz
`` In fact, the company's Terra Drive does not have a built-in
It seems that the degadrive is operating even at 10MHz, so it does not support high speed
I don't think there is software. Is written. Dega Drive is ...

306: [Nikon](#) : 03/01/09 22:40
[>> 305](#)
Megadora software is basically
Even with a machine that was clicked on
It's moving

307: **Nikon** : 03/01/10 00:29
If you put out a model of Tera Drive that is combined with 98
I think it was a hit

308: [Nikon](#) : 03/01/10 01:34
[>> 307](#)
SEGA doesn't do such protection business

309: [Nikon](#) : 03/01/11 02:31
Mega Tower is already here
[>> 292](#) Terra Dora Tower? bridge?
Would like to see.

310: **Nikon** : 03/01/13 03:22
[>> 306](#)
I guess I want to say that it is okay to read ROM at 10 MHz
But TERA and MEGA cannot be said to have the same design around memory.

It's a completely unfounded speculation.
It 's truly stupid

311: [Wataru Yamazaki](#) : 03/01/13 21:28
(^^)

312: [Nikon](#) : 03/01/26 21:32
When SEGA announces the launch of Terra Drive
With a personal computer that is easy to buy even for junior and senior
high school students
I was saying. No way SC-3000? I was expecting
Poor me.
Disappointed with a list price of 100,000 or more ...

313: [Nikon](#) : 03/01/26 22:56
In other words, when we stack 80286, we must be prepared to exceed
10 maso
If it's at least integrated with MSX ...

314: [Nikon](#) : 03/01/26 23:03
I agree. But it's like SC-3000 time
At a strategic price ... About 98,000 yen
With a complaint such as a real PC under 100,000.

315: [Mr. Nikon](#) : 03/01/27 00:01
[>> 310](#)
I wasn't just saying such a thing when I was alive.
Even when the PC clock was up, he said, "Check the condition and
make adjustments."

316: [Nikon](#) : 03/01/27 02:23
Speaking of how to improve the sound quality of Megadora and the
method of remodeling fire, the more correct method of Bakatsu is
It was made public by SEGA to some users.
I also recently learned ...

317: [Nikon](#) : 03/01/27 03:41
[>> 316](#)
The sound quality is improved with Megadora 1
I want to improve it.
Use a black gate for the condenser around FM stone or amplifier stone
Is it correct?

318: [Nikon](#) : 03/01/27 11:10
I wish it was at least 386

319: [Nikon](#) : 03/01/27 17:25
Boon noise is a voltage drop or the capacity of the power supply is
insufficient, so it is better to change the AC adapter to a big one.
I am putting 12V from the AT power supply that I no longer use.
When listening with headphones, adjust the volume with the Megadora
side to the maximum.

320: [Nikon](#) : 03/01/28 00:00

[>> 318](#)

The reason is that MCA is tied up (\neq low price), isn't it?

321: [Mr. Nikon](#) : 03/01/28 00:40

[>> 319](#)

I tried a little bit, but it sure was a hit.

I was worried about the resistance of 7805, but I think it's okay.

322: [317](#) : 03/01/28 02:11

[>> 319](#)

I procured 12V 1500mA and tried it

It didn't improve.

Do I really have to turn on the AT power supply?

Or the limit of Megadora 1? ?

323: [Nikon](#) : 03/01/28 09:00

What is the board version?

VA4 is the best, VA5-6 is OK, but Yu is the general public evaluation.

There is no solution for striking voices on strike 2 because it is a data problem.

324: [Nikon](#) : 03/01/29 00:11

No, it's not PCM but always boon and noise.

Sometimes when I switch screens it disappears for a moment

325: [Mr. Nikon](#) : 03/01/29 13:37

Is it the main body if listening to the headphones with the minimum volume and a boon?

For me, the board was broken at the aluminum plate of the heat sink.

I repaired it with electric wires, solder and Aron Alpha, but the sound was so bad because of VA1.

When the sound changes, it feels like "Zu ..."

326: [Nikon](#) : 03/01/29 22:30

[>> 323](#)

When I opened, I wrote VA1 but ...

From the numbers, the initial type? ? Is this a crap?

327: [Nikon](#) : 03/01/30 22:33

I'm not afraid, but not a horse. I hope you don't mind.

When you listen with headphones, you will be worried.

I changed the capacitor but it didn't work. I may have to change the amplifier IC.

It's faster to buy a new one because it doesn't cost a thousand yen.

It is VA5 or higher that you can see from the back and the board is sticky.

I heard that VA7 is degenerate with respect to noise, but it is unknown because I have never used it.

328: [Nikon](#) : 03/01/31 22:52

Does TeraDrive work on Windows?

329: [Nikon](#) : 03/01/31 23:38

Of course it works.

2.0 Do you want to move it?

330: [Nikon](#) : 03/01/31 23:54

2.0? 3.1 or 95 impossible? (W

331: [Mr. Nikon](#) : 03/02/01 00:32

3.0 demoed normally.

3.1 is not supported by 80286 itself.

The English version 3.1 works.

332: [Nikon](#) : 03/02/01 02:30

[>> 331](#)

Don't lie.

I used win3.1 with leakage.

I've also added multimedia extensions without any sense.

I used tera monitor at 600x800 using DDE.

333: [Nikon](#) : 03/02/01 02:35

One thing is Toshiba's Win3.1?

Or is it a 486SLC transfer?

334: [Nikon](#) : 03/02/01 11:07

3.1 works in standard mode. I can't use the DOS window though.

335: [Nikon](#) : 03/02/01 11:08

I think that the 286 standard mode only worked with 16 VGA colors.

336: [Nikon](#) : 03/02/02 02:42

I remembered something wrong.

Somaso

337: Upaupa: 03/02/09 10:56

In the olden days, it was called PC (386sx) + Megadora from the European manufacturer Amstrad.

It was written on Hamitsu that the hardware came out, but what about that?

338: [Nikon](#) : 03/02/10 12:00

Is this?

Please summarize it.

home.swipnet.se/~w-33411/megapc.htm

339: [Mr. Nikon](#) : 03/02/10 12:30

Looking at this, it looks like a separate board for Megadora and PC.

[ttp: //perso.club-internet.fr/musepat/megapc.htm](http://perso.club-internet.fr/musepat/megapc.htm)

340: [Nikon](#) : 03/02/10 15:08

[>> 338](#)

I read about it, but it looks like I've just changed the TeraDrive to 386.

341: [Nikon](#) : 03/02/10 20:10

It seems that only one of the shutters can be used.

assembler.roarvgn.com/Amstrad_megadrive_computer_1/amstrad_megadrive_computer_1.html

> "Terradora already lacks power at the time of release, BIOS, jumper line Dasa"

What are you saying?

342: [Mr. Nikon](#) : 03/02/14 01:59

What is the partnership with Sammy ...

343: [Mr. Nikon](#) : 03/02/14 23:13

Is Sammy absorbed when it passes away from the momentum?

344: [Mr. Nikon](#) : 03/02/15 14:48

It's a cold situation

345: [Nikon](#) : 03/02/18 16:48

Even if you think it is Sammy's absorption, if you notice it, Sega will take over.

Sega has merged.

346: [Nikon](#) : 03/03/01 01:53

A hard drive off a Terra Drive keyboard for 500 yen

I don't know how to do that

347: [Mr. Nikon](#) : 03/03/01 02:22

Probably because there is no "Mita" key.

Terra keyboard is a good product.

348: [Nikon](#) : 03/03/01 07:16

<http://www.asahi.com/business/update/0301/003.html>

349: : 03/03/01 11:38

[>> 346](#)

What if I bought it without saying anything? It seems that this keyboard is very solid, with many keyboard users.

350: [Mr. Nikon](#) : 03/03/01 18:31

If you don't hate to say a key, you can hold it down

That sound is irresistible for me.

351: [Nikon](#) : 03/03/04 01:15

Do you sell only terakeys? > SEGA

352: [Nikon](#) : 03/03/04 02:19

Something like a terra key membrane.

Compared with the 7756-A01, it looks like garbage.

353: **Nikon** : 03/03/04 02:55

Can I buy the 7756-A01 for 500 yen?

354: **Mr. Nikon** : 03/03/04 05:09

I mean, what is 7756-A01?

I've never heard of (straw

355: (' -ω -') : 03/03/04 06:28

<http://homepage3.nifty.com/digikei/ten.html>

The cock gets hot.

356: [353](#) : 03/03/04 14:29

age has passed

As you might know, the 7756-A01 is like the origin of a 106 keyboard

Of course you can't buy it for 500 yen

If you have it, use it as well as terra key

357: [354](#) : 03/03/04 16:15

[>> 356](#)

No, I told 352.

I know the 5576-A01, which was the base of the 106 key,

7756-A01 means I don't know the keyboard.

By the way, the 5576-A01 is a membrane switch.

Also, Terakey was sold as an OADG keyboard at that time.

Not as a part but as a formal product. (Our keyboard is it)

358: [Nikon](#) : 03/03/04 22:13

Topic 5756-A01

www.kt.rim.or.jp/~chatarou/update/020517.jpg

Well, SEGA is likely to die for Sammy.

359: [353](#) : 03/03/05 00:02

Was it 5576-A01 ...

I was embarrassed by the memory (straw)

360: **Mr. Nikon** : 03/03/05 23:46

<http://page5.auctions.yahoo.co.jp/jp/auction/e22722835>

I'm pretty good ...

361: [Nikon](#) : 03/03/06 22:09

Is a Terra Drive Mouse Worth It?

362: [Mr. Nikon](#) : 03/03/07 21:08

[>> 361](#)

I hate Terra's mouse because it doesn't feel (I don't feel attractive). I

still have it for now

but.

Oh, I skipped one of the terra keyboard key tops. favorite

However, it is depressing (I still buy about 3 if it's about 2000 yen).

I should do my best to repair it.

363: [Nikon](#) : 03/03/09 00:52

I'm sorry I'm sorry.

[>> 289](#)

It's wrong.

Initially, Terra means Earth

I tried to name it, but since it was a registered trademark,

I built Terra and a unit of Terra, and put on a Mega Drive drive that was planned to be installed.

Is ps memo.dat a member?

367: [Mr. Nikon](#) : 03/03/15 00:05

There was a catalog of Yumiko Takahashi at home

Yahoo auction

368: [Mr. Nikon](#) : 03/03/15 00:36

There are rumors of a partnership with MS

Wouldn't you give me a PC hardware again?

Naturally a Windows machine with a notebook or a compact machine

Emulator that all SEGA successive hardware operates, ROM slot

Attached machine (SG-1000, SC-3000, Mark III, Megadrive, Saturn,

Drecast compatible)

A machine for SEGA fans!

369: [Nikon](#) : 03/03/15 17:32

I don't need a PC function, but I want a TERADRIVE function.

Buy if the price is 5 digits.

370: [Nikon](#) : 03/03/15 18:41

[>> 369](#)

TERADRIVE-PC = MEGA DRIVE

371: [Nikon](#) : 03/03/18 22:19

[>> 10](#)

Dricas + AT compatible machine is like Terradrive

There is no failure. But it's too late.

372: [Nikon](#) : 03/03/18 22:35

I have a catalog of Terradora.

I was worried about whether to buy it or not.

After all, I didn't buy it because the specifications on the PC side were poor.

373: **Nikon** : 03/03/18 23:03

[>> 372](#)

Give it away! !

374: **Nikon** : 03/03/19 00:08

There was such a page.

<http://sega.jp/community/segahard/md/tera.html>

375: **Nikon** : 03/03/19 22:39

After graduating from high school, I bought Model-2 with my first pay as a part-time job ...

Then I became a member of society, and I bought the Model-1 and Model-3 as a set with monitors.

If the Terradola design has a low-profile case, I'm going to buy it quickly!

376: **Nikon** : 03/03/22 03:26

[>> 375](#)

Do you own Model-1,2,3?

377: (´-ω-`) : 03/03/22 07:20

<http://homepage3.nifty.com/digikei/>

Good to say clearly!

378: **Nikon** : 03/03/22 23:43

TeraDrive will be supported by mania if more specifications are released

Could you survive a little more?

Anyway, at that time 80286, 68000 was piled up and IBM PC compatible machine that was maniac oriented at that time

Although it is a base machine.

I think the person who bought it would be a person who would like to make Megadora software by themselves.

Certainly, there was a person who asked me to tell me the specifications at Boemaga,

It seems that the answer was that the specification could not be released because it was a license system ...

379: **375** : 03/03/23 01:20

[>> 376](#)

Yeah, Model-1,2,3,2 Teramoni.

When I bought it, I was going to modify the Model-2, so I bought it as a backup,

After all it is.

I'm still in my room.

380: **Nikon** : 03/03/23 14:45

Will it be the last PC of the SEGA brand?

Hope someday another shocking PC announcement.

- 381: **Nikon** : 03/03/28 22:08

BIOS CALL parameters and work areas.

[>> 413](#)
Since I had DOS in ROM, I found it useful for formatting and copying floppy disks.
- 418: **Mr. Nikon** : 03/06/06 10:22
that?
Certainly, at the time of the announcement, wasn't Tera Drive equivalent to PS1?
But it's nice to have an OS in ROM.
- 419: **Nikon** : 03/06/06 12:26

Anything is fine, but if you write PS / 2 instead of PS2, you will not mistake it for Sony's

420: [TERA3650](#) : 03/06/06 14:58

Memorial Kakiko.

There was one tera keyboard that died.

I used to have it for nearly 10 years.

Since there is only one spare, I cannot use it because I am scared.

I touched VDP, Z80, FM sound source from 286 side

Well, how do you use it? I was stuck around.

I got an MD FM sound source interrupt on the 286 side

Can the V-Sync / H-Sync interrupt be taken on the 286 side?

421: [Mr. Nikon](#) : 03/06/07 11:41

OS in ROM? A little charm.

422: [Mr. Nikon](#) : 03/06/07 12:23

TOWNS is also a fantastic C drive ...

423: [Nikon](#) : 03/06/11 21:03

By the way, the TOWNS FM sound source chip was shared with the SEGA MD.

The one jointly developed by Yamaha and Sega.

424: [Nikon](#) : 03/06/13 03:35

It was also with mega noise.

I wanted a book about a chest of drawers (Akamoto?)

It was too expensive to buy.

425: [Mr. Nikon](#) : 03/06/14 22:44

[>> 423](#)

Even if we say joint development, I think Yamaha is developing just by deciding the specifications that SEGA wants.

426: [Mr. Nikon](#) : 03/06/14 23:37

[>> 425](#)

Well, even if I developed it, I simply copied and copied the logic (ry

427: [Mr. Nikon](#) : 03/06/15 01:40

"Tokyo Adachi-ku Ayase High School Girl Concrete Stuffed Murder Case"

The most brutal and cruel event in our history

In 1989, a girl was imprisoned for 41 days, raped about 100 people, and violence and insult from morning till night.

(The main criminal is 5 or 6 people) Blood was splattered on the ceiling in a lynch with a yakuza face. (The criminals say they don't know how many times they hit)

A girl who `` goes home because she does anything " is forced to masturbate (masturbation), naked on the veranda in the middle of winter, danced,

I put fireworks in the hole in the buttocks to explode, and forcibly thrust a 3 cm iron rod into the vagina many times,

Completely destroyed genitals and buttocks. The vagina is used as a cigarette ashtray.

A heavy iron array was thrown down on the face and body, a hot candle was placed on the eyelids, the pubic hair was shaved, and the hands and feet were burned with a lighter.

(It is said that he sometimes ignited a fireman by sprinkling oil on his whole body.)

She inserts a bottle in the anus and kicks it, puts a lighter in the vagina, ignites, burns, faints too many times of pain.

(At this time, all the hair comes off due to stress and fear.) A large amount of semen was drunk, and a large amount of urine was drunk.

The girl's screams didn't look very human.

Frighteningly, there are over 100 people who know they are in captivity, but no one reports. And on the last day, he died after two hours of lynching. (killed)

The corpse's face was deformed so that the position of the eyes could not be seen, and the cheeks were swollen up to the level of the nose, and even the parents did not know who

It's so much that it doesn't stop at its original shape, and the genitals are completely destroyed more severely than the face

It had been. The corpse had no hair. Oronamin C2 on the genital area

The book was in. In addition, the corpse was in a state where its limbs were tied.

Victims cannot endure too much assault before they are killed, kill them, not help! I prayed.

Why don't you reconsider this non-human event?
We look forward to criminal information.
<http://tmp.2ch.net/test/read.cgi/youth/1056462150/>

To be clear, blacks are far better than Asians in multi-ethnic countries such as the United States.

Poor, weak, aggressive, and ugly Asians are good targets for black stress relief.

Blacks produce a large number of well-known athletes and musicians, and Asians are quite down on them.

(Because blacks don't raise their heads, blacks disperse their stress by dealing with Japanese clerks, such as Japanese cuisine heaven.

In addition, the Japanese woman says that it is a meat urinal that will soon let you go.

There are many black men who ask for reverse prostitution, "How about a dollar? (Buy me)".)

It's ridiculous for Japanese people who can only hit behind the scenes without seeing them.

464: [Nikon](#) : 03/07/22 21:54

Recently, I have assembled a compatible machine and connected it to a tera keyboard.

LEDs such as NumLock, CapsLock, etc. when you start using the Tera body

I died early but w key touch is nowadays

Much better than a cheap keyboard.

You can see the seriousness of SEGA back then

The response after the release (T-T)

465: [Nikon](#) : 03/07/24 00:54

[>> 464](#)

I hear that the solder of the terakey LED is easy to come off.
If you open it and re-solder it may come on.

466: [Nikon](#) : 03/07/30 10:14

Sega is about to go to new hardware ...
(Forcibly lift it, etc.)

467: [Nikon](#) : 03/07/31 11:16

Exactly like Exa Drive

468: [Nikon](#) : 03/07/31 16:53

Maybe I'm glad if you sell Tera Monitor 2 using a blast tube.
Supports 15-31KHz, and can be installed vertically.

469: [Mr. Nikon](#) : 03/07/31 19:46

Isn't it up to 31Khz?

470: [Mr. Nikon](#) : 03/07/31 21:10

... That's right. Not enough. I think there is demand.

Then, with 29 inches, you can pass 1280x960 with room.
It is possible to display vertically at 15KHz without up-scanning.
It is impossible.

471 : [Boronjo ySd1dMH5Gk](#) : 03/08/02 05:08

Maintenance.

477: **Nikon** : 03/09/14 02:26

Is there an emu?

478: **Nikon** : 03/09/15 19:39

It is a PC / AT compatible machine, so the key needs a key.
The MD of the MD part is dangerous.

479: **Nikon** : 03/09/16 00:00

>> 478

Test to say that it is not a compatible machine because it is an IBM-
friendly mother

480: **Nikon** : 03/09/18 23:25

Maybe a compatible machine was better.

481: **Nikon** : 03/09/19 09:34

... Isn't it better to have a compatible device ...

482: **Mr. Nikon** : 03/09/24 14:44

It used to be old. The reason why I continued to sell Teradorobu as new
as the last

It was T-Zone. The same was true of pipin @ mark.

In the end.

483: **Mr. Nikon** : 03/10/04 22:29

In the end, how much did it sell?

When the leak was bought, it was 35,000 yen for the monitor and
15,000 yen for model3.

Bonus software (manhole) Please add BASIC / 98 with the difference
from Iran

The clerk at that time who was in trouble because he was told

484: **Nikon** : 03/10/18 03:04

I want SEGA to develop a personal computer again.
SC-3000, Terra Drive ... Honestly for the third time!

485: **Mr. Nikon** : 03/10/18 12:31

There is a sand (ry

486: **Mr. Nikon** : 03/10/19 03:16

At least 10 pieces of dedicated software must be put out together with
the main body.

It lacked appeal. Although it is the most successful hardware in SEGA
history called Megadora.

487: **Nikon** : 03/10/19 04:11

The keyboard was strangely good. The CRT was also exceptionally
good.

Wasn't Megadora good too?

1) After all 286 (class)

- 2) and non-intel
 - 3) Heterogeneous power supply
 - 4) Special BIOS
 - 5) No 5-inch bay
- Wasn't it bad?

488: [y](#) : 03/10/19 11:31

Beautiful lady's beautiful oma ...

<http://www12.ocn.ne.jp/~carlowen/prettygirl/omanko/>

After all it is good! Too good! (* ´Д` *) Hahahah ...

489: [Nikon](#) : 03/10/20 05:28

Was it a AMD 286 compatible CPU? Isn't that bad?

Even if it is at least 286, as long as it is stuck in the socket (tears

It is a mystery whether a 5-inch bay is needed ...

It's about a CD-ROM. The 5-inch FDD is also unnecessary if you consider it an IBM (& compatible) machine.

Tera CD was going to appear anyway (crying

6) ISA bus that does not output 12V (requiring hospitalization to mount SB16)

7) Memory capacity limit too low

8) HDD that is far from the de facto standard

The area is also Yoshiko.

490: [Mr. Nikon](#) : 03/10/20 05:31

Oh, I forgot.

9) 32X does not appear

Was personally urgent. I bought Megadora for this.

491: [Nikon](#) : 03/10/23 22:32

If you can get a Terra design case, I'll be quick.

Micro-ATX with 3.5-inch and 3.5-inch slim drive with Low-Profile, but it's quite so ...

492: [Nikon](#) : 03/11/15 12:20

Take a mower and make a back moist vertical

Aspect ratio with left back muzzle when viewed from the front

Terramoni active at 75 Hz of 800 * 600

How long can it be used

493: [Mr. Nikon](#) : 03/12/05 16:12

I really like the era of Tera Drive when I was there.

Epson 286C (PC Club)

Apple Classic, LC

Toshiba is the second generation of Dynabook

Nichiden wrote notes under the influence of Toshiba

There are all the famous machines with sardines that have problems
Windows also ran on 286 up to 3.0 (English version until later)

494: [Nikon](#) : 03/12/06 23:17

Was it 1990?

Is it about the uphill of a bubble?

495: [1](#) : 03/12/15 18:44

Is this the second anniversary soon?

496: [Nikon](#) : 03/12/15 18:48

Is it about to make dat fall?

497: [Mr. Nikon](#) : 03/12/15 23:28

I found ABM's 286 → 486 Axela at Yahoo Auction.

I was worried for a while because I didn't hold the soldering iron for a while ...

498: [Nikon](#) : 03/12/20 03:31

How to insert 4M SIMM

499: [Mr. Nikon](#) : 03/12/21 13:22

Is it in the past log supplemented by after TERA-NET?

500: [Nikon](#) : 03/12/22 01:41

There was such a thread.

CPU socketing and 486 accelerator riding while watching at that time
I skipped the memory and jumped into the mystery driver and played with it.

Now the body is sleeping in the closet,

Teramonitor separates SYNC? Make a circuit and connect Saturn

I'm playing a game with beautiful RGB.

The keyboard is currently in use.

501: [Mr. Nikon](#) : 03/12/22 01:46

Terrakey is good, isn't it? I wonder if only Terra Keyboard will be reprinted.

502: [Nikon](#) : 03/12/22 01:58

I want Saturn to stick to my current machine

It is interesting to be able to access each other

503: [Nikon](#) : 03/12/22 08:41

You can access each other by using Saturn Basic. I can't tamper with the game data, but I was impressed by how the polygons moved around.

504: [Nikon](#) : 03/12/23 22:09

[>> 500](#)

I forgot whether the monitor was V or H, but remember that it was OK even if I put compound synchronization on one side?

Leakage is also a universal monitor with X68, MAC, PC98, chest of drawers, MSX (exclusively made cable), and others.

It's sad that I've started to get bored recently.

505: [Mr. Nikon](#) : 03/12/24 02:46

That seems to be useless. > Composite synchronization
I'm sorry because I can't find the circuit diagram and the site that published the circuit diagram.

506: [Nikon](#) : 03/12/24 21:47

<http://page4.auctions.yahoo.co.jp/jp/auction/d42585962>
Terradora is not new, but it's out

507: [Nikon](#) : 03/12/25 09:27

When the CRT becomes out of focus, it seems good to replace the capacitor.

508: [Nikon](#) : 03/12/26 11:36

> 503
Motto, also, teach me in detail (Hato)

509: [Nikon](#) : 03/12/26 11:49

However, there was a Megadora on the second floor of Matsumoto Radio for 500 yen;
Nanka, how do you use it?
X Rokuman Yachi's X-BASIC or it doesn't move?

At the Temple Causeway ... a dream, Atsuta Yona ...

Tadano, dream, datta ... but ... huh;

510: [Mr. Nikon](#) : 03/12/26 15:20

[>> 503](#)
Also details Kibonne.

511: [Mr. Nikon](#) : 03/12/26 18:36

[>> 503](#) is a chill that is confused with Saturn BASIC.

512: [Mr. Nikon](#) : 04/01/09 17:34

I'm in Yahoo auction.
Should I buy it?

513: [Mr. Nikon](#) : 04/01/26 23:53

Sell only the keyboard

514: [Nikon](#) : 04/04/06 02:26

That keyboard,
It was a good type with a sense of "type" with a great hitting feeling.

Today's commercially available guys are soft and Ikan.
However, good mecha keys are not usually [USB].

515: [Mr. Nikon](#) : 04/04/06 18:57

Was that keyboard so good?
It was a normal membrane, though.
Our Terradra replaced IBM mechanical after the keyboard broke

The biggest drawback of Terradora is that the HDD is ESDI. I wish I had at least an IDE

516: [Mr. Nikon](#) : 04/04/07 00:25

- HDD is not IDE → SCSI stab on ISA bus resolves → Sound Blaster cannot stab → Masu
- Stab SoundBlaster with SCSI → Megadora Cartridge Riser does not fit → Mouse

……surely.

Both the memory and the CPU were remodeled.

From the general public, 286 CPUs may be the biggest suffering. With a combination of ISA-SCSI card, Mini SCSI, Sound Blaster, etc. I managed to escape (granify).

What an eagle is an amateur

517: [Mr. Nikon](#) : 04/04/08 22:02

DD is not ESDI, but IBM's original method.
If SoundBlaster16 SCSI is used, MD will die, but what?

It is not possible to boot from SCSI ∩ ('▽ `)

518: [Nikon](#) : 04/04/08 22:28

Really? I didn't buy it because I thought it would stick out in length. I will buy it when I find the next one.

519: [Mr. Nikon](#) : 04/04/08 23:02

The 50P cable can be taken out from the gap by removing the lid of the TERA-CD (lol) connector.

520: [Nikon](#) : 04/04/11 02:46

<http://retropc.net/log/200404.html#20040409>

It doesn't matter at all, but I'm thinking that I would like to sell the Terra Drive MODEL-3 set (with genuine monitor and keyboard) for about 20,000 yen without shipping to collect activity funds.

521: [Nikon](#) : 04/04/30 17:48

Is there a Terradora?

522: [Mr. Nikon](#) : 04/04/30 21:23

Absent.

Is IBM-PC / MD emulation enough if we take common sense?

523: [Mr. Nikon](#) : 04/04/30 23:40

[>> 517](#)

No, that is a HDD with a special edge ESDI connector used for MCA.
There should have been a 40MB model per PS / 2 model 50,
If the number of platters does not match because the parameters are fixed in the BIOS of
It was awkward that it couldn't be easily replaced.

Then, since + 12V is not output to the card slot,
Sound Blaster and Sound Blaster16 with SCSI are no good.
It's not like I can't boot. There is no sound. Yes.
In my house, I was connected to MITSUMI standard speed drive.
Force it externally.
The CPU was also replaced with TI486.
I put out a signal line from the chipset and inserted a 16MB SIMM.
But it was such a terradora, but it became a large model at the time of moving.
If I think about it now, I should have thrown it away.
If you use TERA-NET's VDP library that was directly managed by SEGA, you can use Megadora from DOS / V side.
You can also output to VDP.
That was a very interesting machine to play with.
Well, there was also a Tsuwamono connected to MEGA-CD.
I remember the beautiful SONIC CD in RGB, which was really enviable.

524: [Nikon](#) : 04/04/30 23:49

Oh, it was -12V instead of + 12V. Sure.
I remember that Soundblaster's output op amp didn't work.
The power supply itself does not output -12V, put Tsuwamono 7912
Sound Blaster should have been included.

525: [Mr. Nikon](#) : 04/06/26 15:27

Terra Drive 2 is back!

526: [Nikon](#) : 04/06/29 17:03

I said that I connected the Megadora to a PC,

"Bus swap"

What?

Is it just a DMA thing?

Connect to your current PC

Isn't it possible to make a dry drive (explosion)?

527: [Nikon](#) : 04/07/08 23:25

540: [Nikon](#) : 04/11/16 18:30:06

PC engines sell much more than megadrives

Sega, who was likely to lose to the PC engine, sacked CDRMROM as a breakthrough and released a mega CD,

However, the MD market continued to decline as the sales did not reach the expected level and the life could not be extended.

After the release of Sega Saturn, no software was released on MD, and Sega withdrew from MD.

In the end, the Mega Drive, which ended up being completely defeated by the PC engine.

Furthermore, after being sunk by PS, Dorikas fell into a garge machine immediately after its release and withdrew from the hardware industry.

After that, it was a strange SEGA that turned into a dull third party ...

541: [Nikon](#) : 04/11/16 18:50:43

Too subjective

542: [Nikon](#) : 04/11/17 21:31:07

<http://page11.auctions.yahoo.co.jp/jp/auction/n36126859>

579: [Mr. Nikon](#) : 2006/05/11 (Thursday) 01:56:13

I was wondering if I could buy it seriously at that time
I stopped because it was 286

580: [Nikon](#) : Thursday, May 11, 2006 02:11:34

I thought I wanted it for a second but when I thought about it I realized
I had it
It may not work because it has been left for a long time

581: [Nikon](#) : Thursday, May 11, 2006 08:26:01

The keyboard is more valuable than the body.

582: [Mr. Nikon](#) : 2006/05/11 (Thursday) 16:13:36

I wanted it but didn't buy it.
Did you develop the Megadora game?

583: [Nikon](#) : 2006/05/11 (Thursday) 16:18:37

I could do it if I wanted to

584: [Nikon](#) : Thursday, May 11, 2006 16:33:09

Anyway, "I could do it if I wanted to" ww

585: [Mr. Nikon](#) : 2006/05/11 (Thursday) 17:20:47

Well, only people who understand can understand
The ending

586: [Nikon](#) : Thursday, May 11, 2006 19:32:53

If you're doing game development right now, it's more convenient to
use an emu.

Mega drive software. Various Sonic and RPG. It was quite fun
Yesterday, I bought an advanced strategy
- 606: [Mr. Nikon](#) : 2006/06/02 (Fri) 13:39:45
Did you get a Cyrix accelerator or something?
I probably needed a cache driver too
- 607: [Mr. Nikon](#) : 2006/06/02 (Fri) 16:57:33
It's not a CPU socket, so it's hard to solder
- 608: [Nikon](#) : 2006/06/04 (Sun) 12:36:26
At some manufacturer
There was a method of covering from above
It's not 286
- 609: [Mr. Nikon](#) : Thursday, June 08, 2006 10:37:30
> 603
Win3.11for Workgroups worked on 286.
Convenient because ISA NICs were cheap and could be bought at DOS
/ V shops.
However, at that time, a 486PC-AT machine came into Japan,
It also means to put 3.11 in Japanese and put it in TeraDrive ...
- 610: [Nikon](#) : 2006/07/02 (Sun) 23:53:45
Although 286 Axela came out from io and Melco,
When used in Terra, it interferes with daughter board of ISA backward
compatible slot.

The cover type uses the "signal line that stops the CPU" added from
386.
It cannot be used on the 286 because it takes over the bus.

So the only thing that could be used was ABM's Axela.
Still, there was a high hurdle to CPU socketing.
- 611: [Nikon](#) : 2006/07/02 (Sun) 23:59:31
Terawaros
- 612: [Nikon](#) : 2006/08/14 (Mon) 11:46:00
Terradora final form
Create a cpu socket on the pc side and insert a cpu cx486 accelerator ...

Well, is it like this?

Megadora side Mega cd Sudare connector made and forcibly connected
32x in cassette

Hmm? Didn't the 368 edition Terra Drive come out overseas?

613: [Nikon](#) : 2006/08/20 (Sun) 18:23:16

I wanted to dump out the MD save data, but I did various research, but I didn't understand. Someone told me

614: [Nikon](#) : 2006/08/20 (Sun) 18:46:36

Most of them are 8x from 0x200000 to odd addresses

I don't know anything else.

If you want to do it with Megadora, look for the Tool already.

... I wonder if they can find it now.

It would be faster to make a suitable USB connection adapter.

615: [Nikon](#) : 2006/12/26 (Tue) 14:10:18

Is after Tera-NET a library or dead ...

640: [Nikon](#) : 2011/02/12 (Sat) 00:16:51

It sounds like a revolutionary machine at the time.

641: [Mr. Nikon](#) : 2011/03/10 (Thu) 09: 34: 19.84

I can internet

642: [Mr. Nikon](#) : 2011/03/23 (Wed) 12: 05: 05.57

Dera drive squid

643: [Mr. Nikon](#) : 2011/06/11 (Sat) 14: 53: 50.85

If this machine was a collaboration project with IBM, it would be meaningless

However, if you want to (re) enter the PC anyway, it was already an era at that time

Home based on Megadora instead of merging with the late 286 IBM / PC

Wouldn't it have been better to have expanded it to a PC that could be connected to a TV? I think.

Aim for those who have graduated from MSX. X68000 is expensive and ATARI / AMIGA

There was overwhelmingly little information.

While keeping the basic functions of Megadora,

68000 to 12.5MHz version, memory standard 1M / maximum 4M

VDP has more palettes and VRAM is 256K.

640 * 200 / 15bit or 640 * 400 / 8bit (but interlaced)

And modes are also added. (There is also a two-screen mode with fewer colors)

For sound, 22KHz / 8bit / 2ch PCM is added. Of course, Z80 is still alive.

Since there is no problem with a serial connection, there is also a MIDI terminal.

In collaboration with a home appliance maker that didn't put out a home PC at the time,

It may have been Ali who issued a brother machine. Especially Hitachi made 68000.

644: [Mr. Nikon](#) : Tuesday, June 14, 2011 02: 37: 03.54

I heard that the main CPU was a V30 and started as a toy with BASIC

on ROM.

History has turned in a good direction.

645: [Mr. Nikon](#) : 2011/06/14 (Tue) 21: 21: 58.65

Maybe you were aiming for the SC-3000 to come back. Once realized
Perhaps it became an integrated type like the PC-286C that Epson
issued.

(So, I have only one expansion slot and I am in agony.)

Teradora put up another year and teamed up with Compaq,
Accept more if it comes out with specifications around 386SX25MHz
I was lost.

646: [Mr. Nikon](#) : Wednesday, June [22](#), 2011 00: 10: 50.87

The 68000 has 10MHz and the VRAM has twice the 128K.

The RAM of the Z80 was doubled, so it was expanded soberly.

And Teradrive's 68000 is made by Toshiba.

647: [Kumagawa Sakaki](#) [ψDMZBuMECHA](#) : 2011/06/26 (Sun) 14: 40:
27.17

"Recently, a 2 terabyte hard disk has cost less than 10,000 yen ... 』

"4 terabytes is not unusual. 』

648: [Mr. Nikon](#) : 2011/08/29 (Monday) 03: 38: 20.81

386SX 16MHz + 68000 OC 16MHz No, nothing.

(_ \ `) phone

661: [Mr. Nikon](#) : Sunday, June 29, 2014 18: 43: 19.78
It was talked about when the initial MS-DOS and WORD sources were released about three months ago.
Tools included with DOS include BASIC (A) .COM that calls IBM-PC built-in ROM-BASIC.
It also works normally from ROM-DOS (TERA menu) of Terra drive

It doesn't make sense if you have the standard IBM DOS / V 4.0
Used users can use ROM-BASIC by combining with built-in ROM-DOS.

I tried running the BASIC sample program
It's a bit nostalgic to be able to connect to a TV and play in English 200 line mode BASIC like MSX
Since it can be run from the TERA menu, you can play BASIC games on the mega drive pad

Well, compatible BASIC like QBASIC also works
I am glad to be able to use the built-in ROM-BASIC

662: [Nikon](#) : 2014/06/29 (Sun) 18: 54: 09.70
correction

It was QBASIC that could play BASIC games with megadrive pads
BASICA.COM did not work

663: [Nikon](#) : 2014/07/06 (Sun) 15: 21: 39.87
16-bit TERRA DRIVE demanded by the times
<http://ameblo.jp/koorogiyousyoku/entry-11885249730.html>

670: [Nikon](#) : 2014/09/14 (Sun) 12: 49: 35.68
[> >> 667](#)
There is also a 68K board that supports concurrent execution.

671: [Mr. Nikon](#) : 2014/09/14 (Sun) 16: 52: 29.78
A board with 68K connected by dual port was published by The Basic
magazine
It was distributed for 5000 yen as a PC-98 expansion board.

672: [Nikon](#) : 2014/09/14 (Sun) 17: 00: 55.28
x) Substrate with 68K
68K did not appear on the board for 68K, please buy and complete the
parts.
Although there is a completed board with parts on it, I guess it cost
about 50,000 yen.

If you had a PC-98 before that, it was poor and you could buy it after
breaking the word for 200,000 yen.

Teradrive, which I think has already appeared, but had a price-priced
expectation despite being made by IBM.
When I went out, I was convinced that the CPU was 286, but I didn't

want to buy it.

673: [Mr. Nikon](#) : 2014/09/15 (Monday) 23: 33: 44.89

I also had a Terra Drive.

Nifty-Serve wanted to do it and bought it with a modem.

I think the baud rate was 2400bps.

I was excited about PC communication.

I also installed Ichitaro DASH and often used it as a word processing machine.

I bought a printer for this, but it was a time when I had to purchase a device driver separately.

It was a very interesting machine but I was dissatisfied with the 286. After all.

I was in an environment not far from Akihabara, but at that time I had a DOS / V machine

I guess it was hard for local people to master it.

After all, at the end, a person appeared that wanted Nifty connection Sold to that person.

674: [Mr. Nikon](#) : 2014/09/16 (Tue) 15: 23: 31.25

If I had 386SX, I would have bought 4 less, or I might have bought 386SX.

At that time, I used 386DX at work, so I was satisfied with the bus sharing 386SX & Megadora function as a hobby.

This thread spoke for my feelings at the time, and it seems like tears will come out when I read it again.

However, you may have seen the situation because there are a lot of hardware (including information) that does not say that Sega will be released.

[>> 673](#)

Welcome!

675: [673](#) : 2014/09/17 (Wed) 00: 25: 27.95

[>> 674](#)

I'm

The other software I had

Wizardry VI BCF

Wing Commander

was.

After that, there are several Mega Drive cassettes.

I think that he is a person who has been quite familiar with PC communication, word processing, and games.

Originally, I thought.

I didn't know the existence of TERA-NET !!

Or I knew this thread!

Am I not able to add a sound card to Terra Drive?
I have called Sega by phone,
"I can't add more because the power supply doesn't support -12V."
I remember being disappointed at the facts.

However, the threader said that Sega could not officially
It's really easy to do it.
At that time, I didn't have the idea to make it if I didn't have -12V.

Anyway from the sound card at the promotional event that I was doing
in Akihabara
I heard a sound. Maybe my memory is different ...

676: [674](#) : 2014/09/17 (Wed) 21: 03: 24.65

[>> 675](#)

I still have a lot of cassettes as well as mega drives, and I also have
mega CD software
The common point is that you do not own a Teradrive now. As I said, I
never owned it.

The reason why I wanted to buy was mentioned by Mr. [378](#) , but I
wanted to write a 68K code in a slightly broader sense.
If the PC that 386SX and 68K coexist, Towns could have used
Megadrive expansion board.
Considering the performance that was in the era, in 1990 I wanted a
386SX. The other party can be other than IBM.

677: [673](#) : 2014/09/17 (Wed) 22: 13: 03.97

I honestly didn't write any code, let alone config.sys or autoexec.bat
Editing was barely possible.

When I first bought TeraDrive, I didn't understand terms like folders
and files.

Formatting an FDD took hours at first.
(First, I don't understand what format is)

If you don't know how to do it ... sorry. I called Sega.
Kindly told me.

If you try desperately to do something on your own
A word processor without having to install the game yourself or look at
the keyboard
It was such a machine that I could hit it, and it was such a pretty
thoughtful machine.

I will respond to 2006 less

> Does anyone know (have) the storefront demonstration software for
Terradora sales promotion?
> I was doing a Raytre image display and a Megadora scaling rotation
demonstration.

Maybe I had it.

The Terradrive I purchased was a display disposal product, so it included demo software.

But I wanted to return to the normal state, so if you contact Sega, "Please format the HDD before launching INSTHDD.bat."
I did exactly that, and it was no longer clean.

Well, I don't already own a Teradrive.

[>> 609](#)

Windows for Workgroups 3.11 requires 80386 or higher
Windows for Workgroups 3.1 (3.10) also ran on 80286

679: [Nikon](#) : 2014/10/11 (Sat) 09: 58: 00.59

- BG, character, sprite, and sound editors running on the PC
- Basic or Pascal intermediate language compiler that runs on the PC side
- Run-time interpreter running on MD side (also supports remote debugging from PC side)

I think that it was possible to play as it was even if the specifications were not disclosed, as it was impossible to do anything if there was not much.

680: [Mr. Nikon](#) : 2014/10/11 (Sat) 13: 15: 43.13

I mean, isn't there any information to reveal now?

681: [Nikon](#) : 2014/10/11 (Sat) 14: 50: 05.17

[>> 679](#)

> • Basic or Pascal type intermediate language compiler that runs on PC side

Why Basic or Pascal? Why an intermediate language compiler?

682: [Mr. Nikon](#) : 2014/10/11 (Sat) 15: 02: 14.89

It seems that the library that can access the Megadora function from Turbo C has been released, but it was late.

683: [Mr. Nikon](#) : October 11, 2014 (Sat) 20: 45: 29.57

One of the attractions of Teradrive is that you can access megadrive from AT compatible machine (maybe expectation)
That's how I take it. However, I wanted the CPU to be 386SX if possible, and this is the reason for not buying.

From that point of view, it is a good era when the current situation is that "mega drives can be accessed from AT compatibles".
I plan to build a non-billiant environment.

Regulars would like to ask if they peek occasionally and do not burden them with advice.

684: [Nikon](#) : 2014/10/13 (Mon) 19: 55: 26.45

[>> 682](#)

If you can access Megadora from the PC side

The screen is displayed saying that you have permission from SEGA
Even if you make software, you couldn't distribute it in executable
form.

685: [Nikon](#) : 2014/10/13 (Mon) 20: 14: 25.45

There is no problem because it is a sentence that can be taken without a
subject

686: [Mr. Nikon](#) : 2014/10/13 (Mon) 20: 40: 19.99

PRODUCED BY OR

Like GNU at the bottom of the wiki?

689: [Nikon](#) : Thursday, October 16, 2014 04: 26: 26.29

[>> 687](#)

[>>](#) Whether the display shows [686](#) , is it hardware or library?

It is a user-created software and it is a sentence that I do not understand
easily, so it can be ignored.

690: [Nikon](#) : 2014/10/17 (Fri) 11: 54: 45.89

Does it mean that the BIOS is SEGA's license? No problem but subtle?

691: [Mr. Nikon](#) : 2014/10/17 (Fri) 12: 50: 37.32

"This BIOS is ~" is not a sentence

692: [Mr. Nikon](#) : Saturday, October 18, 2014 15: 16: 11.52

Compared to other software at that time, the game of Mega Drive was
good.

I don't know why it was possible.

For people who make their own software, I think the emulator is the
best operating environment.

693: [Nikon](#) : 2014/11/03 (Monday) 21: 07: 34.75

Thanks to the scroll function that stands out from other models

At the time of release, there was only explanation that it had a scroll
function equivalent to that for commercial use, such as X68k

It was a bit inferior to the launch for a while, but Ferios and
From around Thunder Force III, when I started to make a big hit and
when Sufami appeared

Isn't Mickey and Sonic after that a different thing? I think

I was able to realize the fullness of the scroll function.

694: [Nikon](#) : 2014/11/03 (Monday) 21: 14: 10.90

It seems that many people who bought Terra Drive are familiar with

Mega Drive.

This thread may be a hiding place as a thread that talks about the performance of a mega drive unexpectedly.

The situation on the example board is over.

695: [Mr. Nikon](#) : 2014/11/08 (Sat) 02: 24: 29.64

Since the software was very successful in the world market and the software was supplied until the end of the 1990s,

It seems to exceed the limit of hardware even after 1993, when deployment in Japan slowed down

High quality software constantly appeared.

However, it's a pity that many things haven't been released in Japan since the appearance of Saturn.

696: [Mr. Nikon](#) : 2014/11/08 (Sat) 03: 59: 24.47

Vectorman is the best software that hasn't been released in Japan yet.

697: [Mr. Nikon](#) : 2014/11/08 (Sat) 04: 01: 53.20

Speaking of which, it looks like you can actually use a mega adaptor,

I don't think it would have been great if there was a compatibility appeal with the SG series.

Because it is only 68k if it is a Megadora,

Rather than something like a 16bit tie that saw the end,

The successor to a typical 8-bit personal computer, known as the world standard PC / AT machine

Isn't the future appeal better?

698: [Mr. Nikon](#) : 2014/11/08 (Sat) 04: 16: 31.27

> A successor to a typical 8-bit personal computer, known as the world standard PC / AT machine

> Future potential

I don't know what you're saying

699: [Mr. Nikon](#) : 2014/11/08 (Sat) 08: 45: 30.13

Using the mega adapter (typical 8bit) Z80 can also be used as main

Moreover, because it is a world standard PC / AT machine, it had future potential at the time.

It was interpreted (although it may be different) and the meaning was understood.

By the way, the expression "Because the block length is fixed"

In that case, I was pointed out that it was different if I interpreted it as "the block length is constant", but what do you think?

I know that the data structure is not "block length is fixed"

I wondered "the block length is fixed".

700: [Mr. Nikon](#) : 2014/11/08 (Sat) 09: 53: 38.39

The block length is fixed (though it can't be ignored), so you can choose from the hanging suits, right?

There is also a story that using an mega adapter or an adapter that has almost no contents needs an unofficial extension adapter in the first place

It sounds like an idiot.

701: [Mr. Nikon](#) : 2014/11/08 (Sat) 10: 25: 58.52

The function of VDP is simply switched without the magic gate being stupid

I think the magic word was enough.

702: [Mr. Nikon](#) : 2014/11/08 (Sat) 10: 30: 23.38

Was it a bus swap instead of Magic Gate?

703: [Nikon](#) : 2014/11/09 (Sun) 09: 20: 55.89

If Sega had YM2413 in its mega adapter, there would have been some demand,

I did not need further because I proved that adapter = conversion gets with PS reprint

Said he was treated as a child

Well, I liked such SEGA, but if I dare say, Megadora LOVE!

704: [Nikon](#) : 2014/11/09 (Sun) 11: 37: 27.36

Did you have any means to change the Teradrive Megadora VDP to V9990?

705: [Nikon](#) : 2014/11/09 (Sun) 14: 23: 44.29

Buying a master system software after buying a mega drive is a bit I can't think of it, so if someone who originally had a Mark III or master system

Peripherals for purchasing a new drive to dispose of the previous system after purchasing the mega drive

That is a mega adapter, which means that it is not very meaningful hardware

I don't know.

706: [Mr. Nikon](#) : 2014/11/09 (Sun) 15: 05: 52.20

Is it even MSX compatible?

707: [Nikon](#) : 2014/11/09 (Sun) 15: 10: 54.03

Megadrive VDP does not have the function equivalent to TMS9918, so it cannot support SG1000 software.

The same applies to MSX.

708: [Nikon](#) : 2014/11/09 (Sun) 15: 26: 42.56

Anyway, if there is a posture that can not be abandoned even such users several generations ago,

I think that it sold better than the latest shrimp horse, which led to a sense of security that can be used for a long time.

Megadora is the only 8bit compatible machine that successfully migrated 16bit including PC,

It was a waste that it didn't last.

709: [Mr. Nikon](#) : 2014/11/09 (Sun) 15: 29: 00.09

[>> 707](#)

Wouldn't it be nice if I attached it with VGA?

710: [Nikon](#) : 2014/11/09 (Sun) 15: 32: 58.58

[>> 708](#)

Nintendo also released a low-priced NES even after Super Nintendo was released, and PlayStation is similar

It's a strategy and I don't care.

It's ridiculous to drag the architecture and increase the cost.

711: [Nikon](#) : 2014/11/09 (Sun) 15: 35: 14.12

[>> 709](#)

"Such a thing" also costs money, so if you can not show the benefits beyond that, it will not be adopted.

712: [Nikon](#) : 2014/11/09 (Sun) 15: 36: 41.66

Why is literally costing a rework?

713: [Nikon](#) : 2014/11/09 (Sun) 15: 42: 42.77

Mark III is reborn as a portable machine as game gear

That 's good, squid?

714: [Let's go to the election that looks like anonymous @](#) : December 13, 2014

Keyboard too supreme

715: [Nikon](#) : 2014/12/24 (Wed) 13: 54: 46.70

Terra Drive is the same as Megadora 2 and doesn't have a cassette lock mechanism.

But what about the handling around the region?

No way TERA menu is English only

Can English-speaking cartridges with region protection not be used ??

716: [Nikon](#) : 2014/12/29 (Mon) 17: 30: 29.27

Region Protect should have been alive

717: [Nikon](#) : 2014/12/29 (Monday) 21: 54: 24.79

Even though there is a foreign language keyboard setting in the BIOS menu of the PC part

It's a pity that the English speaking people can't use the MD part even if they import individually

718: [Nikon](#) : 2015/01/03 (Sat) 20: 52: 24.48

When listening to a Mega Drive game with the front headphone jack

Somehow the sound is reversed left and right ...

Isn't it just my house? ?

AV terminal looks right and left

719: [Nikon](#) : 2015/01/03 (Sat) 22: 31: 45.27

That's because your ears are reversed

720: [Mr. Nikon](#) : 2015/01/04 (Sun) 20: 43: 11.49

[>> 719](#)

I inadvertently lost to ikura mackerel

If you only look at hello mackerel, also look at ikura mackerel

721: [Nikon](#) : 2015/02/01 (Sun) 19: 19: 18.79

[>> 718](#)

Since the initial left-right reverse output was simply a design mistake, it seems that he could have it repaired by sending it to Sega.

722: [Nikon](#) : Saturday, April 11, 2015 21: 53: 40.90

It was useful as Ichitaro machine for a while

The monitor is compatible with 15Khz and the frequency switching is fast, so I used it with Terra and FM TOWNS.

The text data at that time still remained on the HDD

723: [Nikon](#) : 2015/05/05 (Tue) 18: 33: 14.19

It seems that the cost performance was relatively good, but it was poorly expandable.

There was a 16-bit 98 compatible machine equipped with 286 called PC CULB in the early 90's,

Is it similar to that?

724: [Nikon](#) : 2015/05/06 (Wed) 07: 51: 28.81

The cost performance is amazing.

I'm sure Sprite RAM was doubled compared to Mega Drive.

725: [Nikon](#) : 2015/05/08 (Friday) 22: 24: 06.86

I think Terra Dora is good to have 286 do something like SVP

Mostly sound blaster because it has only one incomplete ISA slot

It's a mess to insert, but it's incomplete

The point that does not move is w

726: [Nikon](#) : 2015/08/17 (Monday) 19: 07: 32.55

Although it's called Tera Drive, I don't think there was a "Tera" scale item in the specs.

The current PC may be more suitable for the name like terabyte or teraflops.

727: [Nikon](#) : Tuesday, August 18, 2015 00: 10: 52.92

lovelive

728: [Mr. Nikon](#) : 2015/09/16 (Wed) 01: 15: 03.04

If you add an expansion card called XTIDE, you can have an IDE hard disk even with a teradrive

You can add more

729: [Nikon-san](#) : 2015/09/16 (Wed) 16: 17: 17.29

You just need to add a LAN board to access the NAS.

The most recent terabyte class NAS

It seems that you can not often access from DOS (LAN manager)

730: [Nikon](#) : 2015/09/16 (Wed) 17: 17: 53.64

I'm saying this is 286

Really

There is no point because you can not run overseas games for AT at the time?

731: [Nikon](#) : 2015/09/16 (Wed) 19: 18: 57.59

[>> 730](#)

As with 32-bit games,

The memory manager using virtual 86 mode couldn't be used ...

At that time, it was quite impossible to make a decent DOS / V environment without UMB.

732: [Mr. Nikon](#) : 2015/09/16 (Wed) 20: 23: 03.98

[>> 730](#)

PC-AT itself should be originally equipped with 80286.

If you need to run an app that requires 386 or later,

It is quite difficult, but there is also a way to put the teradrive CPU back on the 386SX etc.

733: [Nikon](#) : 2015/09/16 (Wed) 21: 24: 21.16

If you think about it, "DOS / V" itself is an OS that assumes 286 or higher.

It's a strange story that you can't use it properly

If conventional memory is insufficient

Move PCDOS3.3 in ROM drive to HDD

There may be a way to make it DOS3 / V

It's different how much DOS3 can be used OS

I think it's better than using the first Dynabook SS or HP200LX

734: [Nikon](#) : 2015/09/16 (Wed) 21: 34: 29.22

I have a Japanese font in ROM

If the font memory is pushed out to XMS with FONTPSX in Vector

Should save some memory

735: [Nikon-san](#) : 2015/09/16 (Wed) 21: 39: 58.59

It seems that there was a successor to the 386, though it had not been announced yet.

Well, rather than that, I will issue official megadrive development tools and materials

It would have been a playable machine if you gave me

736: [Nikon](#) : 2015/09/17 (Thu) 00: 48: 37.78

I saw in some book that there was a 386 machine with the same configuration as Germany abroad

737: [Nikon](#) : 2015/09/17 (Thu) 10: 27: 11.65

Is it a mega PC?

Because it uses the ISA expansion slot of an AT compatible machine

It's like FXGA or V-TOWNS or EPSON 98 emulator.

738: [Mr. Nikon](#) : Sunday, October 11, 2015 21: 23: 39.32

When CPU accelerators were at their peak, only one type supported

teradrive

There was something he had stated.

Since it is a thing that changes 80286 to 32Bit CPU, it is equivalent to 486 which is Pin compatible with i386SX

I remember it was a compatible CPU.

739: [Mr. Nikon](#) : Monday, October 12, 2015 00: 50: 30.54

[>> 738](#)

The 286 and 386SX will not be pin compatible.

740: [Nikon](#) : 2015/10/12 (Monday) 14: 27: 57.70

[>> 739](#)

Mainly for PC-9801, 486 series CUP pin compatible with 386sx 80286 CPU accelerator that can be replaced with

Buffalo), several other types are released from other manufacturers

I was there.

Conversion board with board pattern to put 386sx on 286 socket

On, 386sx pin compatible Cyrix and IBM 486 compatible CPU

(Even though it is 486 compatible, it is not completely compatible with the original 486 of Intel,

In a CPU like 486 with a 386sx compatible CPU core that withstands high clock operation

Combine cache memories. (Product of the concept)

And put a dedicated cache controller in DOS config.sys

It was something to set.

In fact, 90% of the 80286 PCs in Japan were PC-9801 series.

Such a 286 → 486 CPU accelerator exists only for PC-9801.

It didn't seem like it, but in the era of CPU replacement products,

We sell CPU accelerators for PC / AT compatibles sold in Japan.

There was also a manufacturer that was there.

"Are all the types tested before being sold, is this?"

A list of manufacturers and models that support a tremendous amount

I had prepared it, the manufacturer.

741: [Nikon](#) : 2015/10/12 (Mon) 14: 36: 16.97

I think it was the manufacturer I wrote in 740, but I changed 286 to 386sx

A lineup of CPU accelerators that can be changed

Was being done.

Dedicated products of minor manufacturers, such as minor PC / AT compatible machines.

At that time, "For some reason the cache controller worked

I guess there isn't. "

No clock up, no CPU cache, so processing speed

I think there is no change that you can experience, but it will be a 32 bit CPU for the time being

I think there was a merit.

742: [Nikon](#) : 2015/12/06 (Sun) 11: 53: 16.78

There was such a thread.

The accelerator is certainly one using 486SLC or 486SLC2, and the size is the same as 286.

I felt that the height was slightly higher. I wonder if it was handled by Wakamatsu Tsusho.

I can't remember my name ...

Was it Super, Hyper, Cyber, or something like that?

Larger objects that use the board cannot be used because they hit the mounts for FDD and HDD.

The maximum memory capacity is 2.5M, but the mother capacity is 512KB + 1M-SIMMx2,

Skip the jumper from the chipset to the SIMM socket

By making my own driver, 4M-SIMM can be used.

When the mode switch is on the PC side, the clock on the PC side will operate 68K

There was a high possibility that a malfunction could occur on the MD side when the clock was raised by changing the OSC.

The chipset had a function to switch the OSC, so I used it for OC.

SEGA supported the sound card -12V for a fee. Some people remodeled it on their own.

AT-BUS -12V was not adopted because it was not a regular IBM specification.

When the power is turned on, the process moves from 286 to 68K once

If there is a character string "SEGA MEGA DRIVE" in the cartridge slot ROM starting from \$ 0100

After that, the lock is applied so that the cartridge slot cannot be referred from the PC side.

In the case of "SEGA TERA DRIVE", do not lock if it is filled with \$ FF.

If you change the position after inserting the cartridge or attaching a switch to the ~ CE terminal of the cartridge,

It is possible to refer to the cartridge slot from the PC side.

743: [Nikon](#) : 2015/12/06 (Sun) 12: 36: 20.32

The memory on the PC side can be used as it is for 68K, so depending on the conditions,

The taken ROM can be executed only by the main unit.

This condition is that Z80 does not refer to 68K ROM area. When the Z80 sees the 68K area

Bus swap does not work,

To refer to the cartridge slot. Because I forcibly changed the bus

When 68K is running on the PC memory, it takes 5 to 6 WAIT to access the memory.

Considering these, it is possible to pass through MD games with only Terra Drive.

However, if you runaway on the 68K side, you cannot return to the PC side.

Terra's ceiling slot is the same as MD's MCD connection slot, so make your own cable

If so, MCD is also connected.

However, it is quite unstable unless you take measures against noise.

[>> 735](#)

Is the megadrive development material provided to the manufacturer under a license agreement?

Rane.

It hurts that I couldn't open it to the public for free. Library for C language game development

I'm out

It seems that the limit was to analyze it and investigate the I / O area.

744: [Nikon](#) : Tuesday, August 23, 2016 18: 05: 54.50

> 742

Speaking of 286 size CPU accelerator, ABM486GT-X for PC-98 is famous

Can I use it if there is no model-dependent part (such as BIOS function) in the cache driver?

Was there a product diverted?

> 238

Maybe Fukui Electric Industry?

Certainly, I read in a PC-98 book that many CPU accelerators were being released by model at the time.

Even if it is a model directly attached to the CPU, it seems that he modified it if sent

745: [Mr. Nikon](#) : 2016/08/23 (Tue) 20: 47: 13.75

[>> 744](#)

I looked into it, but it may be a bit different because it says "something like a compatible CPU".

[>>](#) I wrote it in [742](#) , but 486SLC or 486SLC2 was used and it was put on the clog for 80286 PLCC.

Since it was quite expensive and I could not buy it, I removed the directly attached PLCC 80286-10 MHz and made it a socket

I switched to 80286-16MHz and clocked up.

10MHz was stable up to about 12MHz, but beyond that, I couldn't run into a runaway right away.

746: [Nikon](#) : Sunday, November 20, 2016 23: 07: 26.42

Although some recent retro game compatible machines have realized SG-1000 compatibility with a dedicated adapter

I wonder why the Megadrive had a MkIII compatible mode but was not designed to be SG-1000 compatible.

If the Megadrive has SG-1000 compatibility mode, the Terradrive will

It's a shame that it was natural to talk about adding the SC-3000 function ...

747: [Nikon](#) : Monday, November 21, 2016 00: 41: 08.30

Don't worry about software emulation and hardware-level compatibility.

The Mark III dedicated function of the Mark III VDP does not completely encompass that of the SG-1000,
It is natural to think that the part responsible for the functions unique to the VDP of SG-1000 was provided in the VDP of Mark III.
Naturally that part occupied a certain area on the silicon die, which was a cost factor

Then, in making the VDP of Mega Drive have the function of that of Mark III,
If SG-1000 compatible functions are added, it will be a cost factor.
It seems that there was not enough room for a mega drive with two CPUs.

By the way, the SG-1000 and SC-3000 are not completely compatible in terms of hardware.

748: [Nikon](#) : 2016/11/21 (Mon) 06: 44: 59.80

[>> 747](#)

MK3's VDP doesn't have the SG series color as it is,
I've heard that they only use similar colors
Maybe VDP has a function like 9918 emulation.

The MD pallets have such specifications for MK3 compatibility or somehow ... 4 pallets ...

749: [Nikon](#) : 2016/11/21 (Monday) 14: 31: 35.53

If there were at least eight pallets, I couldn't lose to the PC engine ...
I want 16 if I want to say it.

750: [Nikon](#) : 2016/11/23 (Wed) 10: 55: 41.43

Looking at the MD BG name table, there are no bits left to make 8 palettes.
2 bytes are used with 1 chip of 8x8. 11 bits with character numbers 0 to 2047,
1bit upside down, 1bit leftward and rightward, 1bit priority, 2bits for palette 0-3, 16bits in total.

Since 68K is a 16bit CPU, it will be 16bit or 32bit, but 32bit is too useless.

It is difficult to choose when it is expressed in 16 bits.

751: [Mr. Nikon](#) : 2016/11/23 (Wed) 12: 17: 22.69

[>> 750](#)
